The ten acres of potatocs were a comparative failure, and we required to purchase standard bushels. The brome grass was more satisfactory; we had twenty acres, half of which was allowed to ripen. From the quantity thus obtained and afterwards carefully cleaned, we were enabled to retain enough to seed down thirty additional acres, and the remainder was sold for \$230.07.

The acreage under crop this summer is as follows: wheat, forty-nine acrea; oats, thirty acres; rye, eight acres; potatoes, six acres; turnips and carrots, two acres; other garden produce, three acres; brome grass, fifty acres.

The farm stock includes one bull, nine cows, one heifer calf, five steers, eleven horses and marcs, two colts and fillies, one boar and twenty-seven sows and small

Prominence is given in many ways to this important department. We believe most of the boys can earn a comfortable and honourable living as farmers. During the greater part of the summer a large majority of the boys are employed on the farm

and garden. They are frequently changed from one line of work to another, in order that they may have the advantage of as wide an experience as possible.

Industries Taught.—Besides the farm and garden work, instruction is given in earpentry, painting, glazing, baking and printing. The carpenter instructor is a graduate of the school, and an efficient workman. In the bake-shop and the printing office the more experienced boys act as foremen.

Moral and Religious Training.—Regular services are conducted on Sabbath morning and evening. On the afternoon of that day Sabbath school is held. A mid-week prayer meeting is also influential for good. Frequently addresses by outsiders are given on moral and religious topics. By kind and earnest appeals to pupils, individually and oelectively, the work of character-building is being advanced.

Health and Sanitary Condition.—The general health of the pupils has been better than in formor years. We attribute this in part to the complete expulsion of the closets connected with the Smead-Dowd system of heating and ventilation. A number of cases of scrofula developed during the year, but the pupils afflicted were skilfully treated by Nurse Milne, who is how a permanent member of our staff. Careful attention is given to the study and practice of the rules and conditions of good health.

Water Supply.—Our water supply is very satisfactory. A Rider hot-air engine pumps the water from an outside well, nearly a hundred yards from the main building, into our large attic tank. During the severe winter weather no difficulty was experienced with the pumping, as the connecting iron pipes are deeply imbedded in the earth.

Fire Protection.—Since we secured our Rider hot-air engine we have little or no trouble in keeping our three large water tanks well filled. This affords an excellent protection against fire. Two large fire-escape ladders are kept in convenient places; six hose reels, with a supply of hose attached, are placed in various parts of the main building. In the upstairs hall are twelve fire-pails, which are constantly full. Handgrenades are kept in nearly all the buildings, including stables, laundry, printing office and carpenter shop. In the main building one of the rooms is reserved in part for fire-appliances, which include four fireman's axes, three patent fire-extinguishers, twenty-four grenades and four Semple fire-extinguishers.

Heating.—Smead-Dowd furnaces heat the main building and prove satisfactory, but sepensive. During the year the total consumption of soft Galt coal was one hundred and seventy-seven tons, and of wood ninety-two cords.

Recreation.—Football continues to be the most popular game among the boys.

They have had numerous matches with other teams, with varied success. As much
outdoor recreation as possible in summer is encouraged, and pupils take delight in
reading. knitting and playing checkers out of doors.

General Remarks.—The third annual graduating exercises were held on April 25.

The class was composed of five boys, all of whom have since been doing well for themselves. Many other ex-pupils are reflecting credit on their alma mater.

In closing this report I wish to speak in very appreciative terms of the splendid services of the members of the staff, and to express my gratifude to the various officials of the Indian Denartment for their uniform courtesy.

I have, &c.,

A. J. McLEOD,

NORTH-WEST TERRITORIES,

HIGH RIVER INDUSTRIAL SCHOOL, DUNBOW, ALTA, September 4, 1900.

The Honourable

The Superintendent General of Indian Affairs,

Sir.-I beg to submit my annual report for the fiscal year ended June 30, 1900.

Location.—This school is situated in a valley near the confluence of the Bow and High rivers, about twenty-five miles south-east of Calgary.

Land.—There are nine hundred and sixty acres in connection with the institution. Half of this land is located in the immediate neighbourhood of the school; the rest, chiefly hay land and pasturage, is situated about twelve miles south-east.

Buildings.—There are two large separate buildings, one for the girls and one for the boys. These buildings contain the dormitories, lavatories, class-rooms, offices, a kitchen, a common diving-hall and a chapel, and also the rooms for the members of the staff. All of these rooms, particularly those in the boys' building, are large, well lighted and well ventilated.

The class-rooms and dormitories afford ample accommodation. The two dormitories in the boys' department measure 50 x 32 feet, and the ceilings are 11 feet high. The dormitory in the girls' school is 45 x 30 feet, and the ceiling is 94 feet high. Viewed from the surrounding hills, the institution has a pretty town-like appearance. Besides the two main buildings there are a number of other buildings. The first house in line with the road is the bakery and flour-store, 45 x 15 feet.

Then follow the blacksmith's shop and iron-shed, 25 x 16 feet; the carpenter and

shoemaker's shop,  $24 \times 30$  feet, a coal and lumber shed,  $56 \times 8$  feet; and the men's quarters, a brick-venered cottage,  $32 \times 96$  feet. In the next line are the two main buildings, a hospital,  $25 \times 30$  feet, and the engine-house,  $36_2^1 \times 16_2^1$  feet.

Behind the engine-house is the laundry, 25 x 30 feet, two stories, with drying-room

In the rear of the laundry there is a poultry-house and yards, 81 x 27 feet; the steep, one 12 x 25 feet, and one 36 x 18 feet; coal and wood-shed, 36 x 14 feet.

Next in order, and to the rear again, are wagon, tool and implement shed, 125 x

23 feet; the horse and cow-stable,  $80 \times 32$  feet; the granary and root-house,  $24 \times 40$  feet. At the back of the stables and granary are the hay and cattle corrals, the calf-shed,  $70 \times 12$  feet; the piggery,  $15 \times 17$  feet, and the slaughter-house,  $24 \times 16$  feet.

Accommodation.—There is ample accommodation for one hundred and fifty children at present.

Attendance.—The average attendance for the year was eighty-four, being thirtysix short of the number authorized. For the past two years, owing to a lack of recruits to replace discharged pupils, the attendance has considerably decreased. Admissions, fourteen; discharges, twenty-four.

Class-room Work.—The prescribed programme of studies is adhered to. Quarterly examinations are held and satisfactory progress is noticeable in the three classrooms.

The use of the English language is compulsory, and only for a short time in the evening are the pupils allowed to converse in their own language.

Farm and Garden.—Two hundred and fifty tons of hay were put up last summer. We threshed three thousand four hundred bushels of oats, and two hundred and two bushels of barley.

The root-crop included two thousand bushels of turnips and mangolds, seven hundred and fifty bushels of potatoes, besides a large yield of carrots and other vegetables.

One hundred and thirty acres are under cultivation this year, and the season promises a bountiful harvest.

Thirty acres of land were broken.

Stock.—One hundred ad sixty-four head of cattle were wintered at the school. Of these, one hundred and eight head belong to the institution, the others, fifty-six head, are owned by the boys. All the work in connection with the feeding and care of the stock is done by the boys, under the supervision of the farm instructor.

The school herd supplied us with \$1.100 worth of beef, all that was required by the institution; besides, we were able to sell beef steers to the value of \$585.

Our inventory of live stock shows that the herd had increased about \$800 in value since last year.

There are now twenty-seven horses and one hundred and two head of cattle. The boys eattle, purchased from their own earnings, number sixty head. The farm work and the freighting of hay, coal, lumber and other supplies, is done by the farm teams in charge of the boys.

Industries Taught.—Carpentry—Six apprentices are employed at this trade, which is the only industry taught outside of farming. During the year the work done by the boys in this department included the erection of a slaughter-house and a piggery; the poultry-house and engine-house were enlarged, and all repairs to buildings and furniture were made by these apprentices. The boys who follow this trade work on the farm a couple of hours daily, and are allowed to hire out for haying and harvesting.

Sewing-room.—The girls learn to sew and knit, to repair clothes and to darn.

They are also taught the use of the sewing-machine, and to make new clothes. They
make all their own clothing, as well as suits, shirts and socks for the boys. In household work they receive daily instruction, and learn how to cook, bake and do laundry
and dairy work.

Baking.—A tradesman, without assistance from the boys, bakes for the institution. He also does our butchering.

Shoemaking.—An ex-pupil is in charge of this department. He is engaged for four or five months during the year to do repairing. No new boots are made and no apprentices are placed in the shop.

Moral and Religious Training.—The pupils are instructed in the doctrine of the Roman Catholic Church. During the summer they assist at mass every morning, and at stated periods there are other religious exercises. On Sunday there is divine service twice.

Prayers are said morning and evening. Catechism is taught, and the children are given every opportunity of benefiting by the teachings of Christianity.

During the year the conduct of the pupils has been satisfactory. Discipline was efficiently maintained without employing any severe measures.

Health and Sanitary Condition.—Although the health of the pupils in general has been good, I regret to have to record the death of two children from concumption.

The school is in an excellent sanitary condition. The buildings are well lighted and ventilated, and the drainage is good.

Water Supply.—A well, close to the river, affords us an excellent supply of water, which is pumped into the tanks in the different buildings by means of a steam engine.

27-i-25

Fine Promotion—All necessary precautions against fire are taken. The tanks are kept full in the different buildings, and we have hose and pipe connection to tanks on each flat. Babeceks, grenades, fire-axes and fire-pails, ready for immediate use, are distributed throughout the passages and rooms. Fire-escapes lead from all dormitories, besides the usual modes of exit.

Heating.—The boys' building is heated by hot-air furnaces, the girls' by ordinary coal stoves.

Recreation.—The pupils have two hours and a-half for recreation each day.

Weekly half-holiday. Football in the spring and fall, and hockey in the winter, are the principal outdoor games.

In winter, dominoes, checkers and other parlour games are the favourite indoor amusements.

General Remarks.—Twenty pupils were allowed to hire out during haying and harvesting. The reports received of their conduct and work were good. All of their earnings were invested in cattle.

I have, &c.,

A. NAESSENS, Principal.

NORTH-WEST TERRITORIES, CALGARY INSPE

CALGARY INSPECTORATE,

The Honourable Calgary, September 1, 1900.

The Superintendent General of Indian Affairs,

Sir,-I have the honour to report upon my inspection of Indian schools during the past fiscal year.

Since my last annual report, I have visited and inspected the following:— Blackfoot Agency.—White Eagle (Church of England) boarding-school. Old Sun (Church of England) boarding school.

Hospital.

Blood Agency.—Kissock Homes (Church of England) boarding-schools.

Roman Catholic boarding school. Bull Horn (Church of England) day school.

Hospital.

Peigan Agency.—St. Paul (Roman Catholic) boarding school.

Victoria Indian Homes (Church of England.)

Hobbema Agency.—Ermineskin (Roman Catholic) boarding school.
Louis Bull (Methodist) day school.

Sarcee Agency.—Church of England boarding school. St. Joseph's industrial school, Dunbow.

Calgary industrial school.

# WHITE EAGLE (C. E.) BOARDING SCHOOL.

I visited and inspected this school on August 29, September 7 and Sepember 12. It is under the auspices of the Church of England, diocese of Calgary. Staff—Rev. C. H. P. Owen, principal; Mrs. Owen, matron; W. H. James, teacher: Mrs. James, Miss Latt, assistant matrons.

Pupils enrolled, twenty-six boys.

Class-room.—There were 18 boys in the school-room, and one at some work. No. 42, Rex Backfat, was interpreter for the North-west Mounted Police, Gleichen. Nos. 35 and 33 attended school at Old Sun's, to be near the hospital for treatment for scrofula.

Examination was satisfactory. I observed some improvement since my inspection the previous year. The boys looked healthy and well nourished.

Dietary.—The school had an excellent vegetable garden, therefore the tables were well supplied with the same, in good variety. I was shown some excellent bread, and meat is given the pupils liberally.

Dormitories.—I found the dormitories and the beds therein clean, the latter were neatly made up with clean linen. The rooms were well ventilated. The kitchen, pantries and the basement (in which are the lavatories), were all of them clean and in good order.

### OLD SUN'S BOARDING SCHOOL

I visited this school on August 16, and September 15. At my first visit the teacher's holidays were on, and I did not see the children in the class-room.

Staff.—Miss Gibson, matron; Miss L. C. Wright, teacher; Miss Applegarth, assistant matron.

Enrolled, twelve girls.

Class-room.—The children were examined in the different subjects for the I, II and III standards. I observed a great deal of improvement in them since my last inspection in November, 1898. I found the children bright and intelligent, and they had improved in speaking English.

Clothing.—The girls were well dressed in turkey-red dresses, which are very becoming; they had on good stockings and boots; their hair neatly braided; they are a credit to all who are looking after them.

Dietary.—I was present at their dinner, a very good one indeed, of meat and potatoes (Irish stew), bread and tea.

I was conducted over the building. I found all clean and in good order, the

dormitories were clean, the beds were neatly made up with clean linen.

The kitchen, pantries, &c., were in neat working order.

Hospital.—I visited the hospital on August 16. There was one indoor patient named Leather, with a broken leg. Everything was in good order and clean, both within and without the building.

KISSOCK HOMES (BLOOD C.E. BOARDING SCHOOLS).

I inspected this school on November 3.

Staff.—Rev. A. de B. Owen, principal; Miss Wells, teacher; Miss Denmark, girls mattor; Mr. Hardy, boys' house master; Mrs. Irvine, cook; J. Yeomans, farming instructor.

Buildings.—I made a thorough inspection of the whole premises; everything was in good order outside. School-house, residence, stables and other outbuildings, two root-houses, containing the season's product of the garden, about 300 bushels of potatoes, 100 bushels turnips, 50 bushels of carrots, also cabbage, red cabbage, winter madish, noines, etc. Also the principal informed me he had sold \$100 worth of vegetables, which sum goes towards paying for the new furnace, which has been placed in the girls' home recently.

There is a good fowl-house, with a number of fowls, several milch cows, altogether nine head of cattle.

27-i-254

A large excavation had been made in the farmer and pupils under the girls' home, for the furnace and fuel room. This has been lined up with lumber.

The work of plastering both homes, for which the department has provided money, was then going on.

The store-room contained a large supply of provisions, and the clothing room was full of all descriptions of made-up new clothing (principally for girls). These were donations from friends in the east. The dormitories were clean with good beds and clean warm bed-clothing.

The kitchen, pantries, laundry and lavatories were all clean and in good order.

There is a woman cook who is assisted in her duties by girls, who are reported as being efficient, both in cooking and bread-making. I saw beautiful white, light bread, just out of the oven, which was made by the girls.

Fire-extinguishing Appliances.—I observed that the fire-buckets were filled with water, and kept in convenient places in different buildings. The fire-axes were on the walls over the buckets; there were also fire-grenades and some fire-engines kept at the same points.

This school was quite a hive of industry, every one was at work, the principal the most busy of all.

Class-room.—In the school-room I met thirty-one pupils. Thirteen others—six girls and seven boys—were engaged working. Of the forty-four children immates, one boy is not as yet enrolled, and there were four half-breeds not eligible for official entrance. These half-breeds—one girl and four boys—have been several years at the school.

Excepting a few juniors, the pupils may all be classed as standards I, IIA., IIB. and III. The children were taken by the teacher through reading, spelling, mental arithmetic. writing on slates, English-speaking, and knowledge of the English language. I was very well pleased with their progress and general intelligence.

The senior class passed unusually well through a severe examination. The children all speak out so as to be heard distinctly. They were all dressed in their ordinary every-day clothes, they had on good shoes and stockings, hair done neatly and clean faces and hands. They looked to be well nourished.

At my inspection a year ago several pupils occupied the sick-room, afflicted with scrofula. At this inspection, this room was empty, due to the successful treatment of them by Dr. Lafferty.

# BLOOD ROMAN CATHOLIC BOARDING SCHOOL,

I visited and inspected this school on October 3.

It was my first inspection of this institution since the occupation of the new school building.

Staff.—Rev. Sister St. Germain, superior; St. John of God, assistant; Proulx, assistant; Fourioux, assistant; Miss K. Fitzgerald, teacher.

Class-room.—There were sixteen pupils present in the class-room, viz.: eleven boys and five girls. Of these one boy was not enrolled, one girl was under age for enrollment, and one girl a half-breed. Therefore, the number of official children was thirteen.

The children—but beginners—read fluently and understandingly, from the primer leaves on eards up to No. XXI. Calisthenics and singing are an interesting part of the curriculum.

The children all looked clean, healthy and well nourished; they were all well dressed.

Buildings, &c.—I was shown over the building. It was clean and well kept; some parts require more furniture; the beds in the dormitories were excellent, iron

cots with wool mattresses, plenty of blankets and quilts, with white cotton sheets and pillow-cases.

The cellar was well filled with vegetables of their own growing.

I observed five pails were filled with water, and five axes on the different landings.

#### BLOOD HOSPITAL

I inspected this hospital on October 30.

There was one indoor patient, a very sick man. Everything was in the cleanest condition throughout, and in the best of order. I inspected the new building, put up last year, for a laundry, milk-house, ice-house, &c.; it is very suitable for the purpose.

Drains were dug, and steps being taken to pump water by windmill from the river, to supply both this institution and the boarding school, which is immediately opposite and nearer to the river than the hospital.

The books of the hospital were presented for my inspection; they are neatly kept

and satisfactory.

well kept.

### BULL HORN DAY SCHOOL.

I inspected this school on January 16.

Lucius F. Hardyman, teacher. There were seven pupils present, nineteen names being on the register.

The pupils were warmly clad, with clean faces: they are but beginners, this school being a feeder to the Church of England boarding school.

Mr. Hardyman is a very conscientious teacher. When his pupils do not present

themselves at the school, he goes after them to their homes.

The school-house is attached to the mission-house; it is of good size, clean and

# SACRED HEART (PEIGAN R. C.) BOARDING SCHOOL.

This school is under the auspices of the Roman Catholic Church, and is situate on the Peigan reserve, a short distance from the agency headquarters.

I visited this school on December 21.

Staff.—Rev. Père Doucet, principal and missionary; Rev. Mother Superior Patrick, matron; in charge of the residence, assisted by three reverend sisters, Miss Hunt, teacher.

Class-room.—In the class-room were eight boys and nineteen girls; six of these pupils are half-breeds, and are not enrolled as Indian children, but in every respectible are treated in the same manner, and receive the same attention, as if they were treaty Indians.

The pupils range in age from six to thirteen years, the boys being all less than ten years.

Six girls may be classed as Sandard II, six pupils as Standard I, the remainder

in the primer and A, B, C.

The higher class read fluently and understandingly, from the second book, spelling the longest words. They did sums up to long division; they write very well, and

their composition is good.

Standard I did equally well according to their grading. All the copy-books were neat and clean, and showed progress. Their drawing-books evinced talent as well as

good taste.

They sing nicely, and perform calisthenic exercises.

Industrial Work—The girls exhibited samples of knitting and specimens of plain sewing, knitting and darning, all of which was very creditable, both to them and the teachers.

Clothing.—The pupils were well clothed, also having on warm stockings and good

shoes. Dormitories.-The dormitories were clean. Each pupil has an iron bedstead;

these were comfortably made up with wool mattrasses and warm bed-clothing. Fire-extinguishing Appliances.-Eight fire-buckets were filled with water and

placed conveniently about the building. There are also two fire-axes, VICTORIA INDIAN HOME (PEIGAN C. E. BOARDING SCHOOL).

This Church of England Indian boarding school is situated close to the Peigan reserve. I visited this school on January 5. Staff .- W. R. Haynes, principal; Mrs. Haynes, matron; J. A. Mason, teacher;

Miss A. Jamieson, assistant matron; Miss A. G. Cummings, cook.

I visited every department and apartment of the school. It is in the best of order, thoroughly clean and business-like.

Dormitories.-The boys occupy the west wing of the building, and the girls the east wing; a door opens from the boys' dormitories to the principal's bed-room, and the assistant matron's bed-room opens into the girls' dormitory. Each pupil has a separate iron bedstead; these were made up with clean and sufficient bed-clothing.

Lavatories .- These, for each wing, are on the main floor. The main or ground floor also contains a girls' day-room, and the boys' day-room is also used as the school-room.

Dining-room.-This is of sufficient size; there are two tables, one for the girls and the other for the boys. Kitchen.—The kitchen has an excellent cooking range; it also contains a pump,

from which is drawn pure spring water. On this floor are also large pantries, which were well supplied with stores of excellent food, breakfast bacon, creamery butter, tea, beef, suet, flour, &c. Clothing-room.-This contains a large supply of new dresses, petticoats, shirts,

&c., showing that the school has some good and liberal friends in the east, who send such large supplies of fine and suitable goods.

The cellars contained a good supply of potatoes, turnips, onions, &c.

Dietary.-The daily dietary or bill of fare for each day's meals in the week was shown to me. It was full of variety of food, and from the appearance of the children, I judged they have sufficient wholesome food.

Class-room.-The teacher, Mr. Mason, was away visiting at Red Deer. There were thirteen girls and eleven boys present in the school, and Miss Jamieson-who is a certificated teacher-was teacher pro tem. I observed the children; they are in ages from six to twelve years; they were cleanly and well dressed, clean in their persons, hair nicely brushed, they looked fat, healthy and happy. They were orderly and well-behaved.

I have made some plain remarks regarding the class-room of this school elsewhere, it will be unnecessary for me to repeat them here, but as an Indian home this institution is nearly perfect.

Industrial Work.—Socks, stockings, muffettees, aprons, etc., were shown as some of the industrial work of the pupils. All this was very well done indeed, and demonstrated the efficiency of the teaching in this direction.

Fire-protection.-There are two Babcocks, and one other fire-extinguisher, but no other appliances.

Since my last visit here a verandah has been added in front, neat fences put up, a flag-staff erected, the grounds levelled, giving the whole premises a well-kept appearance.

# SARCEE BOARDING SCHOOL.

This school is situated on the Sarcee reserve, near the agency headquarters. It is under the auspices of the Church of England, diocese of Calgary. I inspected this school on July 3.

Staff .- Venerable Archdeacon Tims, principal; Mr. P. E. Stocken, teacher and assistant principal: Miss Crawford, girls' matron; Mrs. Marritt, boys' matron,

Class-room.—Sixteen pupils were present, seven boys and nine girls. Four are in Standard I (primer); three in Standard II (first book); two in Standard III (second book); four in Standard IV (third book); one in Standard V (fourth book).

The pupils gave a repetition of their work of the past quarter, spelling, meanings,

arithmetic, meutal arithmetic and geography.

Each class according to its standard, it is pleasing to repeat, has mide good progress in all branches.

With the exception that they do not speak out, which may-in a measure-be accounted for through extreme shyness, they read well and understandingly, with a clear enunciation, not slurring their works, as is too often the case, with a long word particularly. Their spelling was rather surprising for its accuracy.

They were up in tables and have made good progress in arithmetic, according to

In geography they have a wide general knowledge, with some specific knowledge as regards this country. I saw that the teacher had gone outside school-room routine in giving them

talks on general subjects, and that the pupils had taken a good deal of it in, a form of teaching in addition to routine that should be more general than it is, as Indian children neither learn from the parent or from each other, like white children, and are dependent upon their teacher entirely for instruction; when this is limited strictly slow indeed.

Through a re-arrangement of the offices, the school is now held in a well-lighted room of sufficient size to accommodate comfortably all the pupils; it is furnished with patent desks, blackboards, maps, lesson-cards, teacher's chair and table; also an organ.

Dormitories. These are large, clean, well ventilated, and furnished with iron cots; they were neatly made up, with clean linen and clean bed-clothing, with coloured

Lavatories .- These were on the lower floor; they were clean and in order.

Clothing Closets.-A large one for the boys contained quantities of new clothing, such as suits, shirts and underclothing, while another one for the girls, contained dresses, petticoats and underclothing. I understood that this clothing was donated: it shows that the school has large-hearted, liberal friends. These friends had not forgotten the little girls, for there were dolls of all descriptions, which had been thoughtfully sent for their amusement and instruction, fir there is a be of instruction for an Indian child in dressing and undressing a modern doll.

The girls' matron had large quantities of the girls' handiwork to show me ; wellknitted stockings, hemmed new underclothing, darning, &c. They also do their share

in general housework, cooking and kitchen work.

The boys and girls were well clothed, and looked healthy and well nourished.

Fire-extinguishing Appliances.-The fire-buckets were filled with water in the dormitories, the fire-axes were in convenient places, and hand grenades were distributed about.

A windmill for pumping purposes has been added to the establishment since my last visit to the school.

They have a large and productive vegetable garden; it is a great fight to keep down the gophers, which are numerous and very destructive. The boys and teacher have done all the work in the garden.

# Ermineskin Boarding School.

This school is situated in the Hobbema agency. I visited it on August 9. It is under the auspices of the Roman Catholic Church, and conducted by the Reverend Sisters of the Assumption (black nuns).

Sisters of the Assumption (black nuns).

Staff.—Rev. Sisters St. J. de la Croix, superior; St. Cœur de Marie, teacher; St. Bernard, second teacher; St. Flavie, matron; St. Filbranie, cook; St. Valerie, dress-

Class-room.—Of the pupils in the class-room, there were twenty-two boys and twenty girls.

As most of these children are the same as I met in this school a year ago, I had an opportunity of estimating their progress.

It is my pleasure to state that their progress, both mentally and physically, is most gratifying.

The good sister, the head teacher, has given additional proof of her great ability ademonstrated that it is not necessary to speak their tongue, in order to teach Indian children.

She has prepared questions and answers, which I may term general knowledge, that she has drilled into the children in a manner they comprehend. Half an hour spent on this, is astounding, when you think of the raw material she has had to work upon.

Also their mental arithmetic, after a system, taught in her native state, is delightful to the children, and sharpens their wits to the highest degree.

Geography, both of the world and local, has not been neglected: their copy and drawing books are most creditable. We had also dramatic recitations, calisthenics and and vocal music. In reading they have been carefully taught; they speak out, and read as if they understood the subject. In spelling they were made to pronounce the word both before and after, and attention was paid particularly to proper pronunciation.

The children looked to be well nourished, and they appeared to be healthy. They were very well and becomingly dressed, and all had on good stockings and boots.

The girls' hair was neatly braided, and the boys had all a close 'shingle,' which made them look sharp and clean.

I inspected the dormitories. The beds are clean and comfortable; all bedsteads for the boys are iron, half of those for the girls are home-made of wood, but are much warmer for a child to sleep on than the iron cots, as they have side-boards.

The whole school appeared to be in a prosperous condition.

# Louis Bull's Day School.

I visited the day school on Louis Bull's reserve on July 31.

It is under the auspices of the Methodist Church.

Mrs. Goodhand, teacher; assisted by her sister, Miss McIntosh, formerly one of the staff of the Red Deer industrial school.

There are six pupils on the roll. As it was summer vacation, the school was not supposed to be in session, but there were three very clean little children present, and the school-room was in a clean and neat condition.

A great advance in day school curriculum has been made by this teacher. She gives all her pupils baths nearly every day in summer, and once a week in winter. Blouses and dresses have been made for each pupil, which are worn during school hours.

That this has a wholesome influence on the children goes without saying.

### St. Joseph's Industrial School.

This school is situated at Dunbow, a post office near the junction of High river with Bow river. I visited it on February 19, and remained until March 7. I went again on May 28 and remained until June 11. It is under the auspices of the Roman Catholic Church, and is conducted on the per capita principle.

Staff.—Rev. A. Naessens, principal; H. F. Dennehy, assistant principal and accountant; Mr. Gilchrist, senior teacher of boys; Mr. Leonard, junior teacher of boys; Grom Markin, farming instructor; John Markin, engineer, miller, blacksmith, furnaceman; Frank Nutt, carpenter instructor; C. Masse, baker; Louison (pro tem), shoemaker; Rev. Sisters Matcheloose, matron; Mongrain, assistant matron; Kelly, teacher of girles; Mathurin, scaunstress; Le Blanc, cook

There were in residence on March 1, sixty-four boys and twenty-seven girls; total ninety-one pupils.

Farm Work.—Lay Brother, Tom Markin, has charge of the farm work, live stock, &c. Lay Brother, John Markin, is the gardener, being an expert in this business, his work as engineer, miller and furnaceman, admitting of this summer employment.

While the older boys are regularly employed at farm work, every one of them works at it according to his strength.

The yield of 1899 crops was as follows: oats, 3.403 bushels; barley, 201 bushels; particles, 630 bushels; turnips, 3,000 bushels; mangolds, 325 bushels; corn (fodder), 6 tons; green-feed, 55 tons; haw, 290 tons.

In 1900 the following crops were sown: barley, 5 acres; oats, 26 acres; wheat, 6 acres; potatoes, 6‡ acres; turnips, 10 acres; mangolds, 1½ acres; garden, containing cabbage, beets, carrots, onions, &c.. 1½ acres; rye for fodder, 46 acres; brome, 12 acres; total, 1144 acres.

The object is to grow food for the pupils and staff, and the large number of sulve stock. During my inspection the farmer and his pupils were working diligently among the root crops, but the weather and turnip fly were against them, and the turnips were not promising a good crop.

Live Stock.—The school owned 104 head of cattle (seven of them valuable thorough-bred shorthorns), total value, \$2,800: and twenty-seven, horses, mares and colts, valued at \$1,333.

In addition to the above, the pupils own sixty head of cattle, acquired through the principal devoting their earnings to the purchase of heifers.

The pupils' cattle receive precisely the same attention and feed as those of the school. The practice which has grown up here (inaugurated by the principal), of investing the earnings of the pupils in cattle, is particularly commendable. The expense of wintering them for the pupils is considerable, but the principal does not think of that, he is trying to give each one a start with a small herd, on his leaving school. I saw all the live stock and counted them, they were in fine condition, and the care of them is fine training for the pupils.

Pigs are bred successfully, but not to great extent, just sufficient to give a reasonable change of diet to the pupils. A new large pig-house, wherein the food for them can be cooked, has been built recently.

Industries taught.—Carpentry—Frank Nutt, instructor. The following pupils have worked regularly at carpentry, learning the trade:—John English, Paul Fox.
Patrick Patton, Frank Bastien. Each one works alternately every forenoon or aftermoon, or attends the class-room. In winter they were engaged in dressing material for a picket fence. The principal informed me that some of the other pupils are fair carpenters, and work on buildings, &c., during the summer.

Since are last inspection they built and finished the following buildings: cottage for carpenter, slaughter-house, gramary, root-house and stable. The old store-house was removed to a new site; the new storehouse, laundry, ice-house and coal-house were painted, so also were all the window frames and storm sashes of the institution.

Shoe Shop.—The shoe shop is run only to the extent of mending. The shoemaker is an ex-pupil of this school, one Louison, a Sarcee. It is some years since he learned his trade.

Bakery.—C. Masse, baker, does all the work connected with baking, himself, also kills animals and cuts up the beef and pork in suitable joints for the kitchen. His bread is excellent

Engine-house and Mill.—The engine and pumping-house may now be termed a mill; the building wherein is the run of mill-stones has been enlarged, an elevator and grain-screen put in, also stairs, and a turning lathe has been constructed, which is worked by the engine. Grists are chopped for eash or toll for the settlers, and all the grain fed to the school live stock is ground here.

Steam has been furnished the laundry from pipes connected with the boiler, in consequence the labour of the laundry has been much reduced and drying clothes in winter facilitated. Stationary wash-tubs have been put in, and cold water is supplied from a large overhead tank.

Female Department.—This is in a separate building; in it are also the general dining-hall and kitchens, and the chapel.

The small proportion of girl pupils (twenty-seven) in this school keeps them very busy with domestic work and in the sewing-room, while the boys wash their own elothes, and do all the house-work connected with their own building. The girls do mending for all, also make all shirts, drawers, socks, also their own elothing. They also attend to the dairy; and the cooking (excepting bread-making) is done in the girls' decarrament.

Dietary.—The meals were punctually served, of good, wholesome, well-cooked food, bread and vegetables were given ad libitum, and sufficient meat, butter, syrup, fruit, to been then steame and healthy.

Clothing.—All the pupils were particularly well dressed; they had also good stockings and boots, these latter items being the difference between neatness and slovenlines.

The girls were always clean, neat and tidy, with a bright hair ribbon to set them

English-speaking.—I found English universally spoken, and if I addressed a pupil on any subject, would always receive an intelligent answer.

Religious Instruction.—Every afternoon, after school hours, the principal has a class of boys for half an hour, and a class of girls for the next half hour, for religious teaching. In this way, each pupil has about equal to one or two hours a week for

Games.—There are organized games among the boys in their season. Hockey was on while I was there in winter, and football at my second visit; it was engaged in on the half-holidays (Wednesday and Saturday afternoons). An outdoor skatting rink was improvised near the school, so that the dangers of the rivers were avoided.

of the narronvised near the school, so that the dangers of the rivers were avoided.

Class-room.—My examinations took place in June, when the attendance was reduced to seventy-nine.

Girls' Department.—Rev. Sister Kelly, teacher. They were graded as follows:— Standard I, eight pupils; Standard II, seven pupils: Standard II, five pupils; Standard IV, two pupils; Standard V, one pupil; total, twenty-three pupils.

During the examination the pupils were taken over work they had done during the year. The usual difficulty—more pronounced in girls—of their not speaking out,

was experienced. If it is not drilled into them when very young, to raise their voice and speak distinctly, it is fruitless saying anything about it later on, particularly to

big girls, for they turn sulky if reproved, and then will not speak at all.

The different classes were examined in reading, spelling, arithmetic, mental arithmetic, local geography and dictation. In reading (according to their standard) they are fluent, but opt to slur in their pronunciation. Their spelling was very good indeed, also mental arithmetic. They write very well ; some of the older girls were as ready and apt in answering as white girls would be.

Their course of instruction has developed their intelligence so much that they fully comprehend conversation on general topics. To any one understanding Indian children, this is a great point gained and almost sufficient for this generation of

children.

They were all neatly, cleanly and most appropriately dressed; all had on good boots and stockings.

Senior Division, Boys.-Teacher, Mr. Gilchrist. Some boys classed in this division are too old to associate with little fellows called juniors, although they are not further advanced in class than some of the latter.

In this division were thirty pupils, graded as follows : Standard I, two ; Stan-

dard II, nine; Standard III, nine; Standard IV, ten; total, thirty pupils. I spent a day in this class-room, as it takes that time under the half-day system

to meet all the pupils.

With but few exceptions I find Indian boys who have entered a school at six or seven years of age, when they reach fifteen, have learned about all they will absorb from the class-room; if they are not taught before they reach the latter age, they learn but little after that, as they then prefer out-of-door work, and are given it.

The examination in this division was a review of the past quarter's work. They

all did very well, particularly in arithmetic and mental arithmetic.

In reading the teacher was not as particular as I would like regarding pronunciation. They were very good in spelling, and most of them passed well in dictation, composition and writing. They are backward in geography, knowing very little of it. Junior Division, Boys,-Mr. Leonard, teacher. These boys, numbering twenty-

six, were graded as follows:-Standard II. four; Standard IA. eight; Standard IB, fourteen; total, twenty-six pupils.

In this room the character of the boy is formed; here he must be taught to speak out, and habits of cleanliness, therefore much depends upon the judgment, observation

and diligence of this teacher.

They are a fine lot of children, and most of them are developing great intelligence. They were put through and made to show what they have been taught; they are all fond of writing and drawing on their slates. They all read, some of them very well indeed, and some of them spell. Most of them were able to tell the days of the

weck, months of the year, write their own names, ages, and where they came from, on their slates. They knew some multiplication tables, &c. While they are all very young, some have been so many years in the school, they

forget their mother tongue, and will soon outstrip the seniors in the class-room.

Office. I made an audit of the accounts and account books of the institution, Mr. H. S. Dennehy, accountant.

I was very ably assisted in my audit by Mr. E. D. Sworder, assistant principal and accountant of the Qu'Appelle industrial school, who had been sent by Rev. Father Hugonnard to bring up the arrears of work here, caused by the demise of the former assistant principal and accountant, Mr. C. E. Dennchy.

The book-keeping is on the principal of double entry, each original invoice was audited and followed throughout. Trial balances were produced each month to June 30, 1900, when the books were closed for the fiscal year, and a balance sheet produced.

Cash Account.—This is kept with the Imperial Bank, Calgary. This account was

I sent to the department an exhaustive financial report upon this school, dated July 2; therefore, a more extended reference will be unnecessary here.

# Calgary Industrial School.

I visited the Calgary industrial school from June 13 to 17 inclusive; it is under the auspices of the Church of England, diocese of Calgary. It is not conducted upon the per capita system.

Staff.—Rev. G. H. Hogbin, principal; Mrs. Hogbin, matron; A. F. H. Mills, teacher; R. H. J. Young, farmer; C. F. Pippy, earpenter.

This school is for boys only

Class-room.—Thirty-nine pupils were present, graded as follows: Standard I, 6; Standard II, 15; Standard III, 2; Standard IV, 7; total, 39 pupils.

The different classes were examined in reading, spelling, composition, geography, arithmetic, mental arithmetic, tables, &c.

Mr. Pippy and his pupils were engaged in finishing the new stable. It is a good structure, and a most creditable work. A new building has also been constructed upon cold storage principles, having the ice stored overhead; one half of the ground floor is for a creamery, and the other half, cold storage for perishable provisions.

A new bake-oven is being built, adjacent to a projected new building, for a bakery and laundry. This department of the institution was conducted with commendable

energy.

Farm Work.—Mr. Young is instructor. The farm work is conducted with the special view (besides instruction of the pupils) of growing food for the pupils and staff and the live stock. Vegetables are sown upon the large market-garden principle, and the remainder of the broken land is sown with oats.

The gardens were late; they must have been tardy, in the early spring, in working

the land, but with a favourable season there was yet time for large crops.

Live Stock.—The milch cows and young stock are in good condition, and appear to be well looked after.

Domestic Work.—Mrs. Hogbin is assisted by a woman cook and laundress.

The work of this department was performed satisfactorily and promptly. The 'rouse' was regular at 5.30; the meals were properly served on time, and work was commenced at appointed hours. The hitchen was clean and in good order. The domittories were clean, the beds neatly made up, and the rooms well ventilated. The institution was nest and clean throughout; the staff were attentive to their duties.

One eventure a week is set mart for monding, each boy wanding his own clothes;

they require more direct supervision in these duties than would girls, but this is ample

nere, as the work is well done

Domestie work has a homing effect, and the boys will be better husbands for knowing how to do housework, cock, wash clothes, and mend them. Health—One boy was ill in the Calgary hospital. With this exception, and the

case of Dick Weasel, sent home to the Sarcee reserve, on the doctor's order, they all

seemed in good condition and in good health, as well as cheerful and happy.

Religious Instruction.—Every evening after recreation a service is held, principally choral, and after prayers an address by the principal; the pupils appear to enjoy this service.

I have, &c.,

T. P. WADSWORTH, Inspector of Indian Agencies

# NORTH-WEST TERRITORIES,

Qu'Appelle Inspectorate, Fort Qu'Appelle, Aug. 10, 1900.

The Honourable

The Superintendent General of Indian Affairs.

Ottawa.

Sm,—I have the honour to submit the following report of my inspection of industrial, boarding and day schools, in Manitobs and the North-west Territories, from September, 1899, to August, 1900.

# FILE HILLS BOARDING SCHOOL.

This school was inspected on September 23, 1899. Number of pupils present 14: boys 7, girls 7. Number on roll 20. Six boys were out working for farmers, getting wages from six to ten dollars a month and board, one boy was getting fifteen dollars, and one sixteen dollars, with board, and satisfactory reports were received from the employers as to the behaviour and abilities of the bors.

The classification was :-

| Standard |    |    |    |      |      |  |  |    |  |  |  |    |  |      |  |      |  |  |  |  |  |    |    |
|----------|----|----|----|------|------|--|--|----|--|--|--|----|--|------|--|------|--|--|--|--|--|----|----|
| cc       | П  |    |    | <br> |      |  |  |    |  |  |  |    |  |      |  |      |  |  |  |  |  |    |    |
| 44       | II | Í. |    |      | <br> |  |  |    |  |  |  |    |  |      |  |      |  |  |  |  |  |    | 4  |
| 66       | IV | ١. | ٠. |      |      |  |  |    |  |  |  |    |  | <br> |  | <br> |  |  |  |  |  |    | 5  |

|          |    |    |    |      |      |  |  |    |  |  |  |    |  |      |  |      |  |  |  |  |  |    | _  |
|          |    |    |    |      |      |  |  |    |  |  |  |    |  |      |  |      |  |  |  |  |  |    | 20 |

School material ample, and the house proper was in its usual good order.

Mr. Alex. Skene was principal, but was leaving soon to be assistant principal of Region industrial school. There was a good garden, and a large crop of all kinds of vezetables.

The work done by the girls in knitting and sewing was creditable, and the garden work was capital training for the boys. The school took prizes at the fair for butter, bread, eggs, cushions, slippers, mitts and stockings, dresses and darning. Miss Webster was matron, and the pupils were neat and clean, and were doing very well in their class work.

On January 2, 1900, I made another visit to this school, and Mr. E. C. Stewart, formerly assistant principal at Brandon school, was in charge. I made a report to the Commissioner of my visit and of the standing of the school at the time.

#### DAY STAR'S DAY SCHOOL

This school was inspected on October 3, 1899. Mrs. Smith, teacher; number of pupils present, 8; boys, 3; girls, 5; number on roll, 10; classified as follows:—

| Standard | 1 |     |    |      |      |      |      |  |      |  |      |  |  |  |      |  |   |  |      |  |  | 3 |  |
|----------|---|-----|----|------|------|------|------|--|------|--|------|--|--|--|------|--|---|--|------|--|--|---|--|
|          | I | £., | ٠. |      |      |      | <br> |  |      |  | <br> |  |  |  | <br> |  |   |  | <br> |  |  | 4 |  |
|          |   |     |    |      |      |      |      |  |      |  |      |  |  |  |      |  |   |  |      |  |  |   |  |
| ee       | T | ₹.  |    | <br> | <br> | <br> |      |  | <br> |  |      |  |  |  |      |  | _ |  |      |  |  | 2 |  |

There were a few more children on this reserve not attending school, and Mr. Martineau, agent, was to use his influence to get them to do so.

School material ample. There was a good garden, and it had been fairly well attended to by the boys, and the girls showed specimens of their sewing and knitting. I could not report much progress in the class work, except that the pupils spoke out a little better than formerly, but there was room for more active work in this little school. The attendance was regular during the year.

### GORDON'S BOARDING SCHOOL.

This school was inspected on October 5, 1899. Mr. Mark Williams, principal and teacher; Mr. Williams, matron; with an outside and an inside servant. Number of pupils present, 27; boys, 13; girls, 14. Number on roll, 27; classified as under:—

| Standard |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
|----------|----|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|---|
| 66       |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
| 66       | IV |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 | 7 |
|          |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | - | ÷ |
|          |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 2 | 7 |

School material was ample, equipment in good condition, except the desks which were old and shaky; they are home-made, and have been a long time in use. The class-room showed careful and painstaking work on the part of Mr. Williams. The house was the pink of cleanliness and neatness, reflecting much credit on the matron, with the little help this lady had.

Considerable improvements had been made, new water-closets, stables re-roofed, and new doors, root-house improved, new fence around premises, and the whole place showed good management. The garden (as it always is), was one of the best I found in my travels. The crop put away for winter use was 400 bushels potatoes, 200 bushels turnips, 75 bushels carrots, 25 bushels onions, 400 eabbages, 10 bushels beets, 200 bushels mangolds, and the house had a plentiful supply during the season. The flower garden was a pretty sight.

The dairy in the basement was well filled with pails of jam, made from wild fruits, also pickles, made by Mrs. Williams, which showed practical and useful housekeeping.

# MUSCOWEQUAN'S BOARDING SCHOOL.

This school was inspected on October 6, 1899. Number of pupils present, thirty; boys, eighteen; girls, twelve; number on roll, thirty.

The classification of pupils is as follows :-

| Standard I | 15 |
|------------|----|
| " III      | 13 |
| " IV       | 5  |
| •          |    |
|            | 30 |

A few articles were asked for to complete material required.

Staff.—Rev. S. Perrault, principal; Rev. Sister Thiffault, matron; Rev. Sister Alack, teacher; Rev. Sister Agnes, in charge of girls; Rev. Sister Alexandre, cook; A. D. Amour, carpenter; A. Ligault, stableman.

The whole place was in perfect order, and the dormitories, kitchen, dining-room, cellar and dairy were models of cleanliness. The garden was a feature of the school,

and a large crop was being harvested. The best of bread was made in a portable

oven, capable of baking sixty loaves at a time.

A large tank had been placed on the top flat, and a force pump, with piping and hose attached, to keep the tank filled. This arrangement is a convenience to the house, as well as a safeguard in case of fire. The pupils were neatly dressed. The class work showed that Sister Valade was an accomplished teacher, and the progress made since last inspection was most satisfactory. It is always a real pleasure to visit this school. The Rev. Mr. Perrault is an excellent principal, and leaves nothing undone that can benefit his school and pupils.

The cellar was well filled with jam, made from the wild fruits found in the neighbourhood. The best of butter was also made in the house. There was an air of thrift and good management about the whole place that was pleasing. The boys and girls were getting the best of training to become useful in after-life, if they only follow what is taught and shown to them whilst here. The matron was ever busy superintending the various departments of house-work, and was to be congratulated on her excellent management. A financial statement was furnished.

# ROUND LAKE BOARDING SCHOOL.

This school was inspected on November 8, 1890. Number of pupils present, turn-triver; boys, twelve; girls, thirteen. Number on roll, thirty-one. Four were absent owing to sickness, one was out working and one was absent without leave.

The classification of pupils present is as follows :-

| Standard |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
|----------|----|----|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|---|
| 66       |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
| 66       |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
| 66       | IV | ۲. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | 5 |
|          |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | _ |   |
|          |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 2 | 5 |

A few articles in material were asked for; most of the material and all the equipment of this school and house are supplied by the Mission of the Presbyterian Church, also the buildings.

The Rev. Hugh McKay is principal and missionary; Mrs. McKay, matron; two inside servants, and a farmer, who looks after the cattle, of which there is a herd of about one hundred head, besides horses, pigs, poultry, &c.

The farm supplies all the beef, pork, butter, milk, &c., and last year wheat to

give all the flour required.

The financial statement showed all accounts paid. The class-room is presided over by Mr. Sahlmack, a graduate of Mantioba College, and he was doing splendid work. The dormitories, in fact the whole house, was in the best of order, and there was a home-like atmosphere about the place. The pupils play crokinole, checkers, dominose, &c. The meals were nicely served, and tables looked neat, and good order was observed by the pupils. Good faithful work is done at this school; it is the second oldest boarding school in the Territories—the McDougall Orphanage, Morley, being the pioner in this department of work.

# Qu'Appelle Industrial School.

This school was inspected on December 18 and other days. Number of pupils present, 216; boys, 100; girls, 116. Number enrolled, 223, and they come from the following places:—

|                   | Boys. | Girls. | Total. |
|-------------------|-------|--------|--------|
| Duck Lake         | 6     | 9      | 15     |

Boys' Senior Division.—A. J. McKenna, teacher.

Boys' Junior Division.—J. McNabb, teacher. Girls' Senior.—Rev. Sister St. Alfred, teacher.

Girls' Junior.—Rev. Sister St. Ahred, teacher.

All the class-rooms were well supplied with desks, blackboards, and the material was sufficient. The teachers were doing their work efficiently, and the best of order was observed, and I considered capital progress was being made. Some of the boys and girls showed considerable ability in arithmetic and other subjects.

English is freely spoken, and I seldom heard a Cree word, except in the case of some new arrival. I was much pleased with the exercises of both boys' and girls'

divisions, and I spent over three days in them.

I made a full report in detail to the Commissioner, and it will only be necessary to mention a few items in this report touching on the general working of the institu-

tion-the largest one of its kind and the second oldest in the Territories.

Staff.—Rev. Father Hugonnard, principal; Rev. Father Jacob, assistant principal; E. D. Sworder, clerk and storekeeper; A. J. McKnan, tacaher (boys' snino'); J. McNabb, teacher (boys' junior); J. Lapointe, farmer; J. A. McDonald, carpenter; D. McDonald, blackmith; G. Schiek, shoemaker; R. Caron, baker; C. Miles, furmace, painter and night watchman; V. Pealapra, timsmith, plumber, &c.; Rev. Sister Superior Goulet, matron; Rev. Sister St. Alfred, teacher (senior girls); Rev. Sister St. Marianni, teacher (junior girls); Rev. Sister Baland, cook; Rev. Sister St. Armand, assistant matron (girls); Rev. Sister La Mothe, assistant matron (boys); Rev. Sister St. Vital, assistant coak and laundress.

Since last inspection a new horse and cattle stable had been built, 9 x 33 feet; stone and tools, cement and brick floors, bricks used from the old burnt felt building; six- and tools, cement and brick floors, bricks used from the old burnt felt building. Six-teen stalls for horses, and twenty-two for cattle. Implement shed, 80 feet long.

Carpenter shop is 56 x 30 feet. Nine benches and a good supply of tools. Twenty-five boys worked off and on during the year. Doors, sashes, window frames, cupboards,

tables, benches, &c., are made, besides many repairs for outsiders, and on school buildings. The shop looked business-like.

Blacksmith shop is 54 x 16 feet, and well equipped with tools. Twenty boys have received training here during the year, and some of the boys have turned out to be efficient in this line of work.

Shoe shop is 24 x 25, and fifteen boys have worked during the year off and on mending boots, harness, &c.

Tinsmith's shop is 17 x 20 feet. Two boys work here.

Bakery had a new portable oven, which was doing good work. Two boys were helping the baker, second strong baker's flour was used. There was a good hennery and a large laundry bordering on the lake, and a bath-

house.

The main building is in two parts, one for boys and one for girls; both were in perfect order. The chape is on second flat on girls' side, and had been supplied with pews during the year, and there was seating capacity for two hundred and fifty persons. There are three dormitories for girls, containing one hundred and mine fron beds, and one for small boys, with seven beds, and five beds in hospital ward for girls and three in boys' ward.

There is a large sewing-room; girls make all their own dresses, and nearly all the clothing for the smaller boys. Clothing for the larger boys is purchased ready made.

Fire-appliances are all through the buildings, and special pains had been taken

by the principal as to rentilation, which was working well.

The whole work of the house was admirably managed, and the girls were receiving the best of training in housework, as is proved by the excellent reports received from those employing them after they leave the school, and I can bear testimony also to their good housekeeping, wherever I find them on the reserves. Sister Superior Goulet and her faithful staff were to be congratulated on the satisfactory condition of

the house and on the orderly way in which all departments were being conducted.

Boys' Side.—Two dormitories had eighty-nine iron beds, and there were smaller rooms and rooms for staff.

Dining-room had ten large tables, employees on one side and officers' table at one end on a platform. All take meals at same time. Conservatory at one side of the dining-room, and hanging baskets with flowers in various parts of the room gave the whole place a bright and cheerful appearance. Meals are well cooked and served hot. The sisters, assisted by boys and girls, do the waiting, and with over two hundred and fifty pupils and staff, everything goes on as smoothly and orderly as if an ordinary family.

There is a reading-room and library, and I was told good use was made of it,

especially during the long winter evenings.

The gymnasium is always a place well patronized by the boys, but the expense of heating the place keeps it from being used much in very cold weather. The buildings were all in good repair, and the surroundings thoroughly kept clear of rubbish.

Farm and Garden.—The garden here, with probably the exception of the experimental farm at Indian Head, may be classed the best in the Territories. Raspherries, strawberries, red, white and black currants, asparagus, rhubarb, tomatoes, melons, cucumbers, sunflowers, lettuce, onions, pasnips, bests, carrots, cabbases, pumpkins, squash, citron, celery, radishes, &c., are grown. Apples are also grown, and when I was here during the summer I saw the first and only apple grown in the Territories. The reverend father was so proud of this apple that a piece of card-board was hung over it. Please do not touch this apple; but some miscreant of a visitor stole it before it had time to ripen. It proved anyway that apples can be grown here with proper care.

Boys. Girls. Total.

66

The farm consists of 1,120 acres, partly in the valley and partly on the bench,

used for crop, hay and pasture.

The crop of 1899 was a good one, and a great help to the house. The following was harvested: =1,215 bushels oats, 142 bushels pears, 191 bushels barley, 600 bushels turnips, 1,290 bushels potatoes, 70 bushels carrots, 4 bushels beets, 15 bushels onions, 3 bushels parsnips, 500 bushels mangolds, 200 heads cabbage, 100 pumpkins. Thirty-one acres summer fallowed, twenty acres disc-harrowed, thirty-one acres mee land broken, seven acres of brome grass; thirty acres of the crop, including the garden, are in the valley.

Supplies.—Groceries and hardware arc chiefly purchased in Winnipeg, dry goods in Toronto; flour, Indian Head mill; beef, from the Mission at Le Bret, price was \$5.20 per hundred pounds to June 30, 1899, and \$6.25 from July to the time of inspection.

Financial.—I audited the various books, and checked all invoices with ledger and cash-book entries.

Mr. Sworder, the clerk, performs his duties most efficiently, and although the system adopted is of an antiquated style, giving a lot of labour, which is of no practical use whatever, still the books were correct. Full statements were furnished the Commissioner.

I was much pleased with the general efficiency of the school. The pupils speak

English freely, are polite and well-behaved and obedient.

They are comfortably dressed, and I did not notice a ragged garment during my inspection. The reverend principal is as enthusiastic as ever, and the school was holding its position as one of the leading Indian schools in the Dominion.

### ELEHORN INDUSTRIAL SCHOOL.

This school was inspected from March 22 to April 19, 1900.

Number of pupils present, 66; boys, 33; girls, 33; number on roll, 86, from the following places:—

V.....

Mr. Stewart and Miss McCreary had both resigned, and Miss Marks, the new teacher, was conducting both senior and junior pupils in one class-room, and was doing well. A few items of school material were asked for.

My principal business at the school this time, however, was to make a statement of its financial position, including an inventory of all government property as on March 31, 1900, with the view of taking it over from its present management and conductine it in future strictly under the department's control.

I furnished the required statements to the Commissioner, and the school has, since April 1, been under his direct management in the way of purchasing supplies and

the payment of accounts.

The staff consists of: A. E. Wilson, principal and office work; Mrs. Wilson, matron; Mr. Webster, assistant principal; Mrs. Webster, assistant matron; Miss Marks, teacher; Miss Dickons, seamstress; Miss Vidal, cook; Miss Pratt, laundress; John Cook, carpenter; John Sipley, farmer.

Six discharges had taken place, leaving the number of pupils at the time I left at

SIXLY.

The principal, who had been living in a cottage in the town, had moved into the school building, there being plenty of accommodation.

#### St. Paul's Industrial School.

This school was inspected on May 8 and other days. Number present, 120; boys, 67; girls, 53. Number on roll, 120. Classification of pupils:—

| Standard | Ι  |  |  |  |  |  |  | <br> |  |  |  |  |  |  |  |  |  |  | ٠. |  |  |   | 27 |
|----------|----|--|--|--|--|--|--|------|--|--|--|--|--|--|--|--|--|--|----|--|--|---|----|
|          |    |  |  |  |  |  |  |      |  |  |  |  |  |  |  |  |  |  |    |  |  |   |    |

| Broken Head                               | 3     |        | 1      |
| Fairford                                  |       | 1      | 1      |
|                                           | _     | _      | _      |
|                                           | 67    | 53     | 120    |

The staff consists of the following :- J. G. Dagg, principal; Miss Lang, matron; Miss Croc teacher jurior division; Miss Hodgins, assistant matron; Mrs. Birch, laundress; Miss Jackson, cook; Miss Dazg, seamstross; R. F. McDougall, teacher senior division; A. J. Kayl, clerk, during half day only J. B. Line, farmer; Edward Sherwood, carpenter; James Birch, gardener; J. Minion, blacksmith; and two pupil

Mr. Burnham had just commenced classes for boys and girls, teaching calisthenics, and boys in drill, marching, &c., and these exercises were doing good in improving the physique of the pupils, and on a later visit the performance gone through reflected credit on their efficient trainer.

Morning and evening prayers are held regularly, and the pupils attend the parish church on Sundays, morning and evening, and the girls assist in the choir. Sunday school is held in the afternoon. The Rev. Mr. Johnstone, rector of the parish, has other classes for the pupils during the week.

The pupils are well behaved and give no trouble. The boys are experts in playing cricket and football, and the girls take part in tennis, croquet, &c.

The house proper was carefully examined and found in excellent condition.

The basement had been whitewashed and was free of all dirt. The dining-room had been kalsomined, the tables had been improved by removing the iron covering and using white oil-cloth instead, and the change made a wonderful difference in the appearance of the room, and took away the jail look they previously had, meals are nicely cooked and served, and good order was observed.

The kitchen was also in good order. The new brick oven is alongside, and is worked from the kitchen, all the bread is made here, and the larger girls do the work.

The best of bread was made, strong baker's flour being used

The girls' dormitories were models of neatness, iron beds, with brass mountings, nd painted white, each bed, besides the wire spring had a mattress, two sheets, two blankets, a pillow and a white counterpane; a chair is placed at each bed so that the girls can sit on chairs instead of on the beds. There are three dormitories for girls, two with sixteen beds each, and one with ten, each room has a closet for clothing.

The boys' dormitory, since the improvement made by raising the roof, is now one of the best dormitories to be seen, and the change has been money well spent, as the good health of the pupils is no doubt owing a good deal to this large well-ventilated room, compared with the dark, dingy, cramped one formerly used. There are seventy two iron beds in this room, furnished same as in the girls', except that the counterpanes are scarlet instead of white. I confess I like the scarlet best, as they look cosier and warmer than the white ones. Chairs are here also, one for each boy, a urinal and drinking water easy of access. All the rooms of the house had been kalsomined. Two new water-closets have been built at a sufficient distance from the house, one for boys and one for girls.

The sewing-room, laundry and pantries were all found in good order.

The garden was being cleaned up, and a lot of brush removed, new walks made,

The farm crop put in this spring was: sixty acres oats, fifteen acres barley, ten acres vetches, ten acres potatoes and gardens; timothy, five acres; brome grass, six acres; summer-fallow, five acres; pasture, thirty acres; hay meadows, one hundred and ninety acres; land to fence, seventy-two acres; total size of farm, four hundred and three acres.

The old parish school-house is used as a piggery, and a capital one it makes. One corner of the boys' play-room is used as a printing office. Fire-appliances, axes, and pails are provided. The cattle were in fair order, a list was sent the Commis-

Financial.—I audited the various accounts from October, 1897, to March 31, 1900, and took an inventory of all property, which was forwarded to the Commis-

sioner. Mr. Kayll, the clerk, keeps his books up to date, and is most correct in all his work. Miss Lang was proving to be a most capable matron, and her careful management of the inside work of the institution accounts for the economical showing in the expenses.

The principal, Mr. Dagg, was doing splendid work. He has doubled the attendance since he took charge, and has made the school popular with pupils and parents alike, and it is now one of the most flourishing of the industrial schools. Mr. Dagg has a faithful staff, and the prospects of continued prosperity were bright. He is interested in his work, and gives it his closest attention, and these qualities combined with business ability, are sure to be rewarded with success.

# St. Boniface Industrial School.

This school was inspected on May 21, 22, and other days. Number of pupils present, 88; boys, 49; girls, 39. Number on roll, 106; classified as under:—

|          |    | Boys.  | Girls. | Tota |
|----------|----|--------|--------|------|
| Standard | [  | <br>15 | 15     | 30   |

Staff.—Rev. Father Dorais, principal; Albert Adolph, first teacher boys, and charge of boys mornings and evenings; Henri Dubois, second teacher, and charge of boys during the day; Damien Tetreault, carpenter; Wm. McDougall, farmer; Paul

Sale, band master; Rev. Sister Page, matron; Rev. Sister Deschambault, nurse; Rev. Sister Giroux, dining-room; Rev. Sister Clement, seamstress; Rev. Sister Precious Blood, teacher girls; Rev. Sister Pare, laundress; Rev. Sister Marthe, cook: Miss

This being the first time I had inspected this institution, I took considerable pains to give the Commissioner full particulars, not only of its financial position, but of the various buildings and other property, together with the class-room work and the general management of the house, and I was much pleased with all the appointments, and with the quiet and systematic manner with which the work was being carried on. The principal gives his undivided time to the duties of his position. He superintends all outside operations in the garden and farm work, and in any building repairs, &c., and he keeps his own accounts, and although not on such an elaborate scale as some others, they are simple and correct. Father Dorais is a careful buyer, and a capable manager, and so far he has had no deficits, and not likely to have any, so long as the required number of pupils is kept up to the limit. I have not space to give particulars of the various buildings, but they were all well adapted for the purpose, and were in perfect order.

There is a nice flower garden in front of the house, and a vegetable garden on one side, both prettily laid out and nicely kept. The total land in connection with the school comprises about forty acres, only twelve of which are fit for cultivation, but the school has the use of about seven hundred acres from the St. Boniface mission, and in lieu of this the father takes in a few non-treaty Indian or half-breed children. The crop put in this year consists of four acres potatoes, one of garden and turnips, eight of barley, and a field on the mission land of seventeen acres, the remainder being used for hay and pasture. The crop harvested in 1899 was 400 bushels oats, 100 of barley, 600 of potatoes, 100 of turnips, 100 of onions, carrots, beets, &c., 100 tons of hay put up, 20 of which were left over and would be available for this

The house is heated with hot water and lighted with acetylene gas, pipes and fixings having been put in by the principal himself doing the work, assisted by the

carpenter. A summer-house was being erected. The boys' lavatory was a new one, and is a feature of the place, it is 50 x 10 feet,

large bathing space, and automatic water-closets, fixed in basins, concrete floor, and a good flow of water.

The dining-room contained seven long tables, officers' table at one end and men's table in a small room on one side. Tables are covered with zinc. The kitchen had a 'Prowse' range. The dairy had a good supply of jams, jellies, &c., made from wild fruits. The laundry was a roomy place. The sewing and mending rooms were also roomy places. Six sewing-machines, all the clothing for boys and girls is made here, and a saving is thus effected in this item of expenditure.

The boys' dormitory had fifty-nine beds and twenty-four chairs, and twenty-four loose wash basins and ten fixed in a marble stand. The beds are wooden stretchers or 'Beaudettes.' Some have wire springs and some duck, each has a palliasse, two blankets, one sheet, pillow and pillow sham, and boys have night shirts. Cupboard for clothing, and all were nicely folded up, and placed in shelves. Large tank filled with water, and fire-pails, axes and extinguishers were in convenient places. A Mc-Robie fire-apparatus is also in the building, and a Ryder hot-air engine for pumping water.

There are two dormitories for girls, one with thirty-two beds and one with fifteen, furnished similar to those of the boys, and wash basins were also on marble stand. The dormitories were scrupulously clean, as were all the other rooms in the house.

The dispensary is a well arranged place, medicines in a glass case, bottles all neatly labelled.

The best use possible is made of all material; nothing allowed to go to waste; pretty rag mats being made out of cuttings from the sewing-room.

Bread is purchased in the town, twenty-six two-pound loaves for one dollar, being a shade less than two cents a pound. Beef costs six cents a pound, delivered as required, and good beef was being supplied. The bread was also good, being made from strong baker's flour.

The cattle were in good condition; there were twenty-seven head, three horses, sixteen pigs and forty-two poultry. The pupils get all the milk they need; they do not take kindly to porridge, but they get it twice a week. Butter is made in the house.

I audited all the accounts from July 1, 1898, to March 31, 1900, and found them

Supplies are purchased in Winnipeg at wholesale terms, and discounts are gen-

erally taken advantage of when funds on hand are available.

Father Dorais and the sisters are to be congratulated on their careful and intelligent management. Everything goes on like clockwork, and the best is done to give these pupils a training that will make them useful men and women wherever their lot

may be cast.

My inspection was a satisfactory and a pleasant one. Miss Tucker kindly made
two copies of the inventory for me, and did them very nicely, for which I tendered
my thanks, the only reward at my discosal.

#### Brandon Industrial School.

This school was inspected on 9th, 10th and other days in July, 1900.

Number of pupils present one hundred and four; boys, fifty-two; girls, fifty-two.

Classified as follows:—

|    |     | Boys. | Girls. | Total. |
|----|-----|-------|--------|--------|
|    | I   |       |        |        |
| 66 | II  | . 12  | 6      | 18     |
| 44 | III | . 16  | 21     | 37     |
| 66 | IV  | . 4   | 5      | 9      |
| 66 | V   |       |        |        |
|    |     |       |        |        |
|    |     | 53    | 55     | 108    |

School material was plentiful, and both rooms well supplied with desks, maps, charts, blackboards, &c. The pupils are from the following places:—

|                         | Boys. | Girls. | Total. |
|-------------------------|-------|--------|--------|
| Norway House            | . 12  | 17     | 29     |
| Oxford House            |       | 5      | 11     |
| God's Lake              | . 5   | 10     | 15     |
| Fisher River            | . 10  | 8      | 18     |
| Poplar River            | . 1   | 2      | 3      |
| Berens River            | . 3   | 3      | 6      |
| St. Peter's             | . 2   | 1      | 3      |
| Oak River               | . 10  | 5      | 15     |
| Cross Lake              | . 4   | 2      | 6      |
| White Cap (Moose Woods) | . —   | 1      | 1      |
| Bull Head               | . —   | 1      | 1      |
|                         |       |        |        |
|                         | 53    | 55     | 108    |

The pupils had improved in speaking louder when reading, and less Cree was heard than formerly in and around the school, and would soon be completely stopped.

64 VICTORIA, A. 1901 Discipline and supervision very good. Miss Valentyne and Miss Peacock are

both accomplished and painstaking teachers.

Staff of house proper is: Rev. T. Ferrier, principal; Miss Sutherland, matron; Miss Valentyne, teacher senior room; Miss Peacock, teacher junior room; Miss Marshall, assistant matron; Miss Black, seamstress; Miss Marty, laundress; Mrs. Gordon, cook; Jas. R. Earle, assistant principal; J. G. Milne, farmer; T. B. Barner, gardener; Henry Armstrong, carpenter.

The whole place was in excellent order. The drains were working well. Furnaces were in proper condition, and heating had been satisfactory during the past

winter, and the consumption of fuel much less than formerly.

A few of the rooms had been painted, and all kalsomined in various tints, giving the house a checrful appearance. The basement had been whitewashed with lime, and the cement floor repaired.

The dormitories and other rooms were in good order, beds well supplied with palliasses, blankets, sheets, pillows and counterpanes, and all perfectly clean, the

whole reflecting credit on Miss Sutherland, the efficient matron.

The sewing-room, under Miss Black's care, was doing good service, and the girls were making rapid progress in needlework, and could make their own dresses.

The mending and darning room, under care of Miss Marshall, was kept busy repairing and patching, an important part of work in a place like this, and where

deficits are to be avoided.

Miss Marty had charge of the laundry, and a lot of work is done in this place in keeping bedding and clothing clean. Some of the ironing done by the girls in finer

work would have done credit to a Chinaman. The kitchen was well looked after by Mrs. Gordon, assisted by the girls, many of

whom were experts. The boys' clothing-room had been fitted up with nests, so that each boy could keep

his clothes under his own number. The kitchen and dining-room had been fully equipped with all needed requirements.

The dining-room had been kalsomined, tinted walls and white ceiling, and it looked bright and cheerful. The tables had white oilcloth, and the dishes were white granite, meals well cooked and served hot, and always on time; no confusion. Food is varied, and all get what is good for them; porridge in the mornings, and good, wholesome soup and the best of bread. Potatoes are never wanting in the bill of fare. and other vegetables when in season. Window shades had been provided, and wire screens for doors and windows to keep out the flies.

The reception room had been provided with chairs, and the floor covered with linoleum; a cabinet made in the shop holds the medicines and school stationery not

in use.

Two fire-escapes had been put up, one at each end of the building, connecting with the dormitories on both flats. The grounds around the building had been levelled and trees planted.

The girls' play-ground is inclosed, and there are swings; indoor games consist of

checkers, crokinole, &c.

The boys' play-ground is in the valley in front of the house, and foot and baseball are the favourite games which the boys seem to enjoy in the evenings, and they are experts. The farm had been improved by the removal of stones and brush, bringing more land into use for cultivation.

The crop put in this year was : wheat, 19 acres; oats, 34 acres; barley, 5 acres; corn, 5 acres; potatoes, 84 acres; turnips, 34 acres; carrots, 1 acre; mangolds, 24 acres; millet, 11 acres; brome grass, 31 acres; summer fallow, 15 acres; new breaking, 6

acres; hay meadow, 11 acres.

The garden comprises about eight acres, and was prettily laid out and hedges planted as wind-breaks. The garden had passed the dry weather very well, owing to a system of irrigation, supplied from the springs on the bench, and this system could at little expense be extended so as to irrigate the whole bottom of the farm. The cattle numbered twenty-three head, six horses, nine pigs and thirty-six poultry, all in the best of condition.

Mr. Barner was bringing the garden into good condition, and was paying more attention in the meantime to the useful instead of the ornamental. The farmer, Mr. Milne, is experienced in the business, having been farmer at

Regina industrial school, and was for some years at the Experimental Farm, Indian

Head. The crops before I left promised to be as good as last year.

Financial.-I audited the books and accounts for the year and found all correct, and a balance on hand after paying all expenses. The deficit of a year ago, \$1,969.14, was paid by the Methodist Missionary Society, and all accounts liquidated on August 11, 1899,

Supplies are purchased in Brandon, and by paying cash the best terms possible

are obtained, and compare favourably with prices in Winnipeg.

Bread continues to be purchased, twenty-six two-pound loaves for one dollar, or a shade less than two cents a pound. The bread supplied is of the best quality. Beef

was seven cents a pound, delivered at the school as required.

The staff is an efficient one, and the utmost harmony prevails, each one doing his or her best for the success of the work, and I cannot say too much in favour of the principal for his excellent management during the year. He took hold when things were in a poor condition, and it will now compare in efficiency with any of the schools in its management and in satisfactory results, for, after all, this is what tells. Mr. Ferrier is early and late attending to one thing or another, and strangers when visiting are struck with the fine appearance of the farm and buildings, and with the healthy, clean and well dressed boys and girls. My inspection was a satisfactory one.

## FILE HILLS BOARDING SCHOOL.

During the year I made a second visit to this school. The pupils were having their holidays. The buildings had undergone a complete renovation, and painting, plastering and kalsomining had been done from top to bottom, and it was never in

Mr. Stewart had left in May last, and Rev. Mr. Farrer is now principal, and Mrs. Farrer, sen., is matron, and is a most capable one.

The garden had a large crop of all kinds of vegetables.

I have, &c.,

ALEX. McGIBBON, Inspector of Indian Agencies and Reserves.

NORTH-WEST TERRITORIES, BATTLEFORD INSPECTORATE.

PRINCE ALBERT, October 31, 1900.

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Sir, - I have the honour to submit my third annual report on the inspection of Indian schools.

THE CHURCH OF ENGLAND BOARDING SCHOOL, ONION LAKE,

This school was inspected on December 8 and January 24.

Staff.-Rev. J. R. Matheson, principal; Mrs. Matheson, M.D., C.M., matron; Miss M. Lang, teacher; Miss Shaw, seamstress; Miss Phillips, housekeeper; Miss Bussell, cook; Albert Fraser, general assistant.

Attendance.—The pupils present numbered thirty-four, classified as follows:—

|    |     |        |      |          | 3; non-treaty |    |      |
|----|-----|--------|------|----------|---------------|----|------|
| 44 | II  |        |      | <br>"    | 4 "           | 2  | " 6  |
| 66 | III |        |      | <br>     | 4 "           | 7  | " 11 |
| 44 | IV  |        | <br> | <br>"    | 3 "           | 7  | " 10 |
|    |     |        |      |          | _             | -  |      |
|    |     | Total. | <br> | <br>" 14 | . "           | 20 | " 34 |

School-room.—The school-room is a plain but commodious room, well lighted and ventilated, and properly equipped with blackboards, desks and other furniture. There was on hand a sufficient supply of maps, text-books, reference books, stationery and other school material.

Class-work,—The efficiency of the class-work has been materially increased by the appointment of a duly qualified teacher, whose attention is devoted solely to the work of the class-room. The pupils passed a creditable examination. Singing is regularly taught, though outside of ordinary school hours. The discipline of the school is good.

Industries.—Much of the spare time of the boys is turned to useful account at gradening and the care of stock, while the girls have regular instruction in needlework and every kind of house-work.

Premises.—The buildings have been enlarged during the past year, and the premsies generally have been greatly improved in appearance.

THE ROMAN CATHOLIC BOARDING SCHOOL, ONION LAKE,

This school was inspected on December 22.

Staff.—Rev. W. Comiré, principal; Rev. Sister St. Ignatius. superior; Rev. Sister St. Strick, first teacher; Rev. Sister Mary of Nazareth, second teacher; Rev. Sister St. Stanislaus, boys' seamstress; Rev. Sister Minée de Marie, grifs seamstress; Rev. Sister St. Lawrence, laundress; Rev. Sister St. Alexis, housekeeper; Rev. Sister Ste. Honorine, cook.

Attendance.—There are in all sixty-two pupils enrolled, classified as follows :-

|          |       | <br>[]      |     |             |     |        |    |  |
|----------|-------|-------------|-----|-------------|-----|--------|----|--|
| Standard | I     | <br>Treaty, | 24; | non-treaty, | 11; | total, | 35 |  |
| 66       | II    | <br>66      | 9   | 66          | 1   | 44     | 10 |  |
| 66       | III   | <br>66      | 3   | 44          |     | 66     | 3  |  |
| 66       | IV    |             | 9   | 66          | 1   | 66     | 10 |  |
| 66       | V     | <br>22      | 3   | 44          |     | 66     | 3  |  |
| 66       | VI    | <br>66      | 1   | 44          |     | 66     | 1  |  |
|          |       |             |     |             |     |        |    |  |
|          | Total | <br>66      | 49  | 66          | 13  | 66     | 62 |  |

Management.—The discipline of the school is good, and the conduct of the pupils is exemplary. All the subjects of the programme are regularly taught, and during class hours there is a close and constant application to study. Throughout the building all necessary attention is given to cleanliness, ventilation and arrangement.

The accounts of the institution are kept with detail and accuracy. The present accommodation is in some respects insufficient, an additional class-room, a recreation-room, and a more convenient kitchen being required.

#### SADDLE LAKE BOARDING SCHOOL.

This school is conducted under the auspices of the Roman Catholic Church. It was inspected on January 12 and 16.

Staff.—Rev. H. Grandin, principal; Rev. Sister St. Evillé, superier; Rev. Sister Dougherty, first teacher; Rev. Sister O'Neill, second teacher; Rev. Sister Eugénie, cook; Rev. Sister Briault, nurse; Rev. Sisters Celina, Colombe and Legoff, general assistants, Joseph Hookin, disciplinarian; Edmond Schmidt, servant.

Attendance.—The enrolment consists of forty-four treaty and two non-treaty pupils, classified thus :--

| Stand | ard | I  |    |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  | 1- |
|-------|-----|----|----|--|--|--|---|----|---|----|--|--|--|--|--|--|--|--|--|--|--|--|--|----|
| 46    |     | Ι  | [. |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  |    |
| 66    |     | I  | I  |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  | 1  |
| 66    |     | I. | ۲. |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  |    |
| 46    |     | 1  |    |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  |    |
|       |     |    |    |  |  |  |   |    |   |    |  |  |  |  |  |  |  |  |  |  |  |  |  | _  |
|       |     |    |    |  |  |  | 1 | Pe | t | al |  |  |  |  |  |  |  |  |  |  |  |  |  | 4  |

Classes.—In their class-work the pupils are arranged in two divisions, according to sex. Both are under competent instruction, and the general tone is good. Reading and the use of English rightly receive chief attention, and in the higher forms the pupils read with much facility and with a fair understanding in any part of their reading books. I had the privilege of attending a Christmas entertainment given almost entirely by the pupils of the school. In recitations, songs, dialogues and drills they acquitted themselves creditably, and showed that nuch care had been exercised in their training. A handsomely executed time-table is hung conspicuously in the boy's school-room. It is well arranged and is adhered to.

# THE BATTLEFORD INDUSTRIAL SCHOOL.

This school was inspected March 22 to 31. It is under the auspices of the Church of England.

Staff.—Rev. E. R. Mathesen, principal; Thomas McKim, head teacher; M. B. Edwards, general assistant; J. H. Scott, farmer; E. Brown, carpenter; P. Taylor, blacksmith; J. Suffern, night-watchman; Mrs. M. A. Ward, matron; Miss C. Thornton, assistant matron; Miss E. Sheppel, nurse; Miss I. B. Brokowski, cook; Miss B. Plumb, baker and dairy-maid; Miss E. Schofield, laundrean

Attendance.—There were at the date of inspection ninety-four pupils enrolled. Of these four were sick and ninety were present at examination.

Classes.—The progress of the pupils has been seriously retarded by frequent changes of teachers, especially in the primary form, where the work had become much disorganized. The senior form is again in charge of a competent teacher, and better results may be expected. On account of low speaking and indistinct articulation oral work is less satisfactory; than written. It is worthy of note that one of the pupils passed the public school leaving examination in 1899, and another was being prepared for the same examination in 1990, with a fair prospect of success.

Industries.—The usual industries are carried on, gardening, the care of stock, and earpentry receiving the largest share of attention, and being attended with good success.

Premises.—The buildings are for the most part in good repair, and the grounds have undergone some further improvement with the effect of rendering them neat and attractive.

Management.—The records of the institution are accurately kept; all moneys received and disbursed are fully accounted for; and the expenditure has been kept strictly within the per capita grant.

# 64 VICTORIA, A. 1901

EMMANUEL COLLEGE, PRINCE ALBERT.

This institution was inspected on May 4 to 9th. It is under the auspices of the Church of England.

Staff.—At the date of inspection the staff consisted of Rev. James Taylor, principal; Allan Scott, head teacher; Mrs. Jones, matron; Miss Jones, assistant matron; Miss H. McKay, primary teacher.

Attendance.—There were fifty-seven pupils enrolled, classified thus :-

| -ALGERTAGE: | THUL  | HOTE | 11113 | SCICIA | pupus | Carrotacte, | CHOSTICU | on mo |
|-------------|-------|------|-------|--------|-------|-------------|----------|-------|
|             |       |      |       |        |       |             |          |       |
|             |       |      |       |        |       |             |          |       |
|             |       |      |       |        |       |             |          |       |
|             |       |      |       |        |       |             |          |       |
|             |       |      |       |        |       |             |          |       |
| 66          | VI    |      |       |        |       |             |          | 4     |
|             |       |      |       |        |       |             |          | _     |
| 1           | Total |      |       |        |       |             |          | 57    |
|             |       |      |       |        |       |             |          |       |

Class Work.—Nine of the most advanced pupils were absent from the examination, and the progress shown by those present was only partially satisfactory. This is in part attributable to repeated changes of teachers, which, however, was quite unavoidable.

Industries.—Gardening and farming in connection with the institution, which have always been attended with success, are being prosecuted with renewed vigour. The work is all done by the boys under the direction of the principal, and the training in these industries afforded here is of a most useful character.

Premises.—The buildings were in need of remodelling and repairs, but the surroundings of the school are attractive, and the premises are kept in good order.

## DUCK LAKE BOARDING SCHOOL.

This school was inspected May 14 to 19. It is under the auspices of the Roman Catholic Church.

Staff.—The staff at the date of inspection was as follows:—Rev. M. J. P. Perutet, principal; Rev. Alex. Fournier, assistant principal; Thos. Dwyer, teacher senior boys; Alfred Boyer, cappenter; George Boyer, stockman; Hugo Girard, farmer; Moise Charette, assistant farmer; J. M. Guillemot, gardener; D. McKennie, baker; Joseph Lacroix, night-watchman; Louis Areand, fireman; Madame Kent, matron and teacher of senior girls; Madame Elizabeth, teacher junior girls; Madame Josephine, general assistant; Sister Agnes, cook; Sister Barghmans, laundress; Sister Madeline, seamstress; Miss Paris, assistant seamstress.

Attendance.—The pupils in attendance number ninety-six, and are classified thus:—

|    | II    | <br> |      | <br> | 23     |
|----|-------|------|------|------|--------|
| 66 | III   |      | <br> | <br> | <br>19 |
| 66 | IV    | <br> | <br> | <br> | <br>9  |
|    |       |      |      |      | _      |
| 3  | Cotal |      | <br> | <br> | <br>96 |

Twenty-two were admitted since last inspection, and a considerable number immediately before, thus accounting for the large proportion of pupils in Standard I.

Examination.—The class work has been attended with fair success, and the results of the examination were moderately satisfactory, and encouraging, inasmuch as an improvement is indicated. Space and Equipment.—Lack of space and school-room accommodation is being remedied by the erection of a large addition to the main building. Already comfortable patent desks for one hundred pupils are on hand; and with these improved facilities an increased prosperity should attend the work of the class-rooms.

Industries.—Carpentry, gardening and the care of stock and poultry are taught under competent instructors, and the larger boys display much skill and interest in these industries. The girls are taught all departments of house-work very systematically.

Discipline.—Outside of school hours all the pupils are kept under strict discipline and supervision.

# DAY SCHOOLS.

The following day schools within the limits of this inspectorate were visited during the year: Red Pheasant's, Sweet Grass', Tbunderchild's, Poundmaker's, Little Pine's, Saddle Lake, Goodfish Lake, Whitefish Lake, John Smith's, James Smith's, Whitecap's, Mistawasis', Ahtahkakoop's, Sturgeon Lake, Wahspaton's, Montreal Lake and Lac la Ronge.

All these are being conducted with moderate success except Sturgeon Lake, which seems likely to be closed for lack of attendance. For the most part the teachers fall short of the department's requirements as to qualification; but only in exceptional cases is it possible to procure duly qualified teachers, owing to the meagreness of the remuneration, and the privations that are at present inseparable from the work.

I have, &c.,

W. J. CHISHOLM, Inspector of Indian Agencies.

BRITISH COLUMBIA.

ALBERT ROLPRING SCHOOL

ALBERNI, July 6, 1900.

The Honourable

The Superintendent General of Indian Affairs,

Ottaw

Sm,-I have the honour to submit the annual report of the boarding school at Alberni, for the year ended June 30, 1900.

Location.—This school is located on the banks of the Somas river, close to the Shesaht reserve. The school is two and a half miles from Alberni.

Land .- There are sixteen acres of land in connection with the school.

Buildings.—The main building is 38 x 43 feet, three stories high, not including basement. In the basement are a milk-room, laundry, drying-room, pump and furnace. In the first flat are children's dining-room, 25 x 17 feet, reception-room, staff dining-room, kitchen, pantry, scullery and store-room. In the second story are two boys' domitories, 24 feet 6 inches by 17 feet 6 inches each; wash-room, 11 x 12 feet; bath-room, store-room and teachers' rooms. In the third story are the girls' dormitory, 17 \(\frac{1}{2}\) x 20 feet; wash-room, 11 x 9 feet; staff bed-rooms and store-room. The school-room is fifty vards from the main building, 95 x 29 feet. A houe, 30 x 20 feet, one story and a-half high, serves as a play-room for boys, and tool-house down stairs, and a carpenter shop upstairs; can annex to this hous, 12 x 26 feet, serves as a

64 VICTORIA, A. 1901

laundry. Other buildings are stables, wood-shed, 30 x 13 feet; root-house, 14 x 20 feet.

Accommodation.—There is accommodation for forty-five pupils, besides staff.

Attendance.—There are thirty-three pupils on the roll, twenty-one boys and twelve girls; our actual attendance is twenty-nine. Two of the boys have gone on a sealing cruise for three months. During the year, eight boys and eight girls received their discharge, and twelve boys and five girls were admitted.

Class-room Work.—In the class-room are taught the usual subjects in the public school course; special attention is given to composition and the use of English.

Farm and Garden.—About six seres are cleared, and nearly all of it is under cultivation. We have an orchard of one hundred and sixty trees; apples, plums, pears, peaches and cherries, besides a lot of small fruit. The garden is doing fairly well. The land is exceedingly difficult to clear, and some of it requires draining before it is ready for cultivation, entailing a great deal of expense before any return is made.

Industries Taught —Farming and gardening is taught, also plain carpenter work. Having thoroughly renovated the home, the boys have taken part in the painting and kalsomining. The girls are given a thorough knowledge of housekeeping.

Moral and Religious Training.—The children are regularly instructed in the teaching of the Bible. Family worship is held morning and evening. The pupils attend church in Alberni every alternate Sabbath, the other Sabbath having service in the school-house. Every Sabbath we have Sabbath school at 3 p.m. In the evening a song service is held.

Health and Sanitary Condition.—The children have enjoyed good health, having only had two serious cases of sickness. Our sanitary conditions are good.

Water Supply.—The supply for the home is obtained from the Somas river, a windmill pumping it up into a large cistern, and into a tank for fire-extinguishing. We have also a well for drinking water.

Fire Protection.—There are four Carr extinguishers distributed through the

Fire Protection.—There are four Carr extinguishers distributed through the building. Fire-pails full of water are kept in convenient places. About one hundred and fifty feet of hose is kept on hand in case of fire.

Heating.—The home is heated by a hot-air furnace in the basement.

Recreation.—The boys indulge in football, and are very fond of the game, but the football ground has its drawbacks, as some forty stumps eight feet high, and a few of them three feet thick, are distributed over the ground. The boys and girls are very fond of swimming and canoeing. In winter indoor games are provided.

I have, &c., I have, &c.,

JAS. R. MOTION,

Principal.

British Columbia,
Bishop Christie (Clayoquot) Boarding School,
Vancouver Island, July 20, 1900.

The Honourable

The Superintendent General of Indian Affairs, Ottawa.

Sir,—I have the honour to submit my first report for the year ended June 30, 1900. History.—The Bishop Christie Indian boarding school owes its existence chiefly to the untiring efforts of the Rev. A. J. Brabant, the pioneer Indian missionary of the west coast of Vancouver island, and is named after the Right Rev. A. Christie,

Bishop of Victoria, B.C., who warmly supported Father Brabant in the realization of his favourite project. A grant for fifty children having been obtained and all preliminaries being arranged, active work was commenced in June, 1899, and on May 20 of this year the building was ready for occupancy. On May 28, school was opened with ten pupils. At the close of the fiscal year the register showed sixteen boys and twelve girls.

Location.—The school possesses an ideal location for a boarding school on the gently rising northern shore of St. Mary's cover, in Claryoquot sound, on the west coast of Vancouver island. Situate about two miles from the Opitata reserve, and three miles from Clayoquot post office, it is far enough to secure privacy and near enough to be within easy reach. Guarded against the cold north wind by high mountains, sheltered by mighty veterans of the primeval forest from the prevailing east and west winds, it enjoys a charming view of the varied seenery of Clayoquot sound.

Land.—One hundred and sixty acres of bush land have been pre-empted for the benefit of the school.

Buildings.—The building, 40 x 60, frame, is divided into two separate equal parts, one for boys and one for girls. On the first floor are found the parlour, the office, the kitchen, and separate dining-rooms and class-rooms for boys and girls, the latter being used also for play-rooms. The second floor comprises the chapel, two officers' bed-rooms and two dormitories with titteen beds each, and two small bed-rooms. The children's bedsteads are all iron, white enamelled, and each bed is furnished with excelsior mattress, two heavy woollen blankets, double sheets, one feather pillow and one white spread. All the rooms are high and airy, well ventilated; the class-rooms are provided with large windows, admitting a flood of light.

Accommodation.—There is good accommodation for twenty-five boys and twenty-five girls, fifty being the authorized number.

Class-room Work.—The course of studies outlined by the department is followed as closely as possible under the circumstances. For the present, as all the pupils are new, unable to speak English, attention is given mainly to reading and writing.

Industrial Work.—The boys are employed at clearing and beautifying the premises around the building, and the girls attend to the general housework and take their turns in the kitchen. Four boys have already learned to make bread. Some of the girls though perfect strangers, to the work, are showing remarkable skill in swing, both hand and mechine, and in kuitting.

Moral and Religious Training.—Particular attention is given to this branch of education. The children in the short time that they have been at the school have learned all the usual prayers. Morning and evening prayers are said in common. The conduct and obedience of the children is most commendable.

Water Supply—There is an abundant supply of good crystal water, which is pumped by a hydraulic ram into two tanks of one thousand five hundred gallon capacity and placed sufficiently high to force the water through all parts of the building.

Fire Protection.—This is rather deficient. On every floor, though, there are two taps, and fire-hose is kept in readiness on each side of the building. All necessary measures will be provided in course of time.

Heating .- All heating is done by means of stoves.

Recreation.—At low tide the sandy beach affords the children a large and beautiful play-ground for their favourite outdoor pastimes, as football, baseball, jumpic, vaulting and racing for boys, and skipping-rope and eroquet for girls. For the rainy season they are well provided with all kinds of indoor games.

64 VICTORIA, A. 1901

Remarks.—While many equipments and improvements are still wanting, it is the intention of the management to provide them in the course of the year, and no pains will be spared to place the school in first-class working condition in as short a time as nossible.

I have, &c.,

P. MAURUS, O.S.B., Principal.

British Columbia,
The Port Simpson Girls' Home,
Port Simpson, June 30, 1900,

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Sir.—I have the honour to submit the following report of the Crosby Girls' Home

(Port Simpson boarding school) for the year ended June 30, 1900.

Location.—The school is located at Port Simpson, and is situated just outside the

limits of the Tsimpshean reserve.

Land.—The land is owned by the Woman's Missionary Society of the Methodist Church, Canada. There is an area of two acres which is well fenced, but, for the most part, in a rough condition.

Buildings.—The buildings consist of a house, 60 x 40 feet; wood-shed, 24 x 12 feet; tank-house, 15 x 15 feet; play-room, 28 x 20 feet. The wood-shed, tank-house and play-room are all connected with the main building. There are also a chicken-house, 10 x S feet, and water-closet, 12 x 5 feet. The house is a frame building of four stories, with rooms as follows:—

First Floor.—Kitchen, 21x24 feet; pantry, 13x18 feet; furnace-room, 24x11 feet; store-room, 21x8 feet; lavatory and dressing-room, 17x26 feet; laundry, 14x10 feet; bath-room, 6x8 feet; root cellar, 12x14 feet; height of cellings, 8 feet.

Second Floor.—Pupils' dining-room, 26 x 25 feet; teachers' dining-room, 14 x 11 feet; teachers' sitting-room, 15 x 12 feet; office, 10 x 11 feet; pantry, 11 x 13 feet; hall, 9 x 24 feet; sewing-room, 24 x 14 feet; school-room, 20 x 24 feet; ceilings, 10 feet 6 inches in height.

Third Floor.—Two dormitories, each 27x20 feet; hospital-room, 15x24 feet; hall, 9x24 feet; store-room, 10x15 feet; matron's bed-room, 17x12 feet; sewing teacher's bed-room, 15x11 feet; height of ceilings, 10 feet 6 inches.

teacher's bed-room, 15 x 11 feet; height of ceilings, 10 feet 6 inches.

Fourth Floor.—Dormitors, 37½ x 20 feet; dormitors, 22 x 26 feet; school teacher's bed-room, 13 x 13 feet; hall, 9 x 16 feet; height of ceilings, 9 feet 4 inches.

Accommodation.—Accommodation can be provided for fifty pupils and four teachers.

Attendance.—Enrolment, fifty, average, 36:325. Present number, forty-one. Class-room Work.—In the class-room, excellent work has been done and promotions made in every standard. The subjects taught are: reading, writing, arithmetic, grammar, dictation, spelling, geography, history, hygiene, music, Bible history and doctrine, and the Methodist catechism.

Garden.—A few flowers, vegetables and berry bushes are cultivated, but owing to unfavourable conditions of soil and climate, little can be accomplished in this line.

TRACHERS AND GIRLS OF THE WILLIAMS LAKE INDUSTRIAL SCHOOL, B.C.

Industries Taught.—The industrial teaching consists of instruction in general house-work, laundry work, cooking and bread-making; also, in sewing, knitting and fancy work. Under the instruction of teachers in the different departments, the pupils perform all the work of the establishment.

Moral and Religious Training.—The pupils are carefully trained to be honest, truthful, obedient, industrious, kind and obliging. A Bible lesson is taught each day, and religious instruction takes a prominent place in the school routine.

Health and Sanitary Condition.—The sanitary condition is good and drainage excellent. There were five cases of measles during the year, all of whom recovered. Three pupils have died during the year, one of consumption, one of tubercular meningitis, and one of kidney disease.

Water Supply.—The water supply is derived from a stream at some distance from thouse, and is conducted by a flume into a tank, from which it is distributed through the house by means of pipes. The rain water from the roof is also received into the tank. All water passes through a filter before being received into the tank.

Fire Protection.—The fire protection consists of two chemical fire-extinguishers, one dozen pails, one fireman's axe and three ladders. An efficient fire brigade is organized in the village, and the fire hall is but a short distance from the school. Steps are being taken to organize a fire drill among the pupils and to better equip the home for protection in case of fire.

Heating .- Heating is furnished by six stoves, and an open grate. The hot-air furnace is worn out.

Recreation.—Regular hours are set apart for recreation, which consists of games, music, walks, boating and general play. Club-swinging is practised, and exercise in the open air encouraged and enforced.

I have, &c.,

LAVINIA CLARKE,

Principal.

British Columbia, St. Mary's Mission Boarding School. Mission City, July 15, 1900.

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Sm,—I have the honour to submit my annual report for the fiscal year ended June 30, 1900.

Location.—The St. Mary's Mission boarding school is situated on the north bank of the Fraser river, one mile east of Mission junction, on the Canadian Pacific railway. The surrounding scenery is most beautiful. As the buildings stand on a bench some two hundred feet above the level of the river, a splendid view is obtained of several snow-tipped mountains and a large portion of the ever-verdant Fraser valley.

Land.—There are three hundred and sixty acres of land in connection with the school, the property of St. Mary's Mission. This area of land comprises forty acres of pasture, fifteen acres in grain, sixty acres in hay, and ten acres in roots and vegetables; the rest being heavy timber land. The soil is fairly good, but, on account of the heaviness of the timber, the clearing of land is very slow and expensive. How

27-i-27

ever, we succeeded this year in clearing about ten acres, which are now ready for the plough.

Buildings.—The boys' and girls' schools, which are four hundred and twenty feet agent, stand in a line with the mission chappel, and command a magnificent view from the river and the railway. Their dimensious and divisions are as follows:—

I.—The boys' school consists of main building, 38 x 79 feet, and a wing, 29 x 20 feet. The first floor comprises the following rooms, viz.: chapel, 35 x 17 feet; yestry, 5 x 15 feet; parlour, 14 x 14 feet; school-room, 26 x 20 feet; dining-room, 32 x 15 feet; kitchen, 13 x 19 feet; pantry, 8 x 8 feet; store-room, 14 x 8 feet; bed-rooms, 8 x 12 feet; wash-room, 8 x 8 feet.

The second floor comprises: linen-room, 14 x 14 feet; library, 14 x 14 feet; infirmary, 14 x 10 feet; nine bed-rooms, 14 x 9 feet; water-closet and bath, 8 x 8 feet.

The third floor comprises: dormitory, 30 x 54 feet; toilet-room, 15 x 8 feet; toilet-room, 12 x 8 feet; water-closet and bath, 8 x 8 feet.

II.—The girls' school consists of main building, 30 x 72 feet, and a wing, 24 x 48 feet. The first floor comprises the following rooms, viz.:—two parlours, 10 x 14 feet; two bed-rooms, 11 x 14 feet; school-room, 22 x 14 feet; recreation-room, 30 x 14 feet; linen-room, 8 x 14 feet; kitchen, 24 x 24 feet; pantry, 5 x 8 feet. The first floor comprises two parlours, 10 x 14 feet.

The second floor comprises: chapel, 16 x 35 feet; vestry, 9 x 14 feet; school-room, 44 x 14 feet; sewing-room, 24 x 14 feet; three bed-rooms, 9 x 14 feet; bath-room, 24

x 24 feet; water-closet, 8 x 8 feet.
The third floor comprises: dormitory, 44 x 29 feet; two toilet-rooms, 7 x 10 feet;

bed-room, 8 x 14 feet; water-closet, 6 x 8 feet,

The boys' and girls' schools, which are frame buildings with plastered walls, are now nearly twenty years old, and much in need of substantial repairs. The foundations are giving way in many places; it efloors are much worn out, the plastering and

painting need to be renewed. It is our intention to pay these matters prompt attention as soon as the pecuniary means are available. III.—The outbuildings in connection with the school, their dimensions and uses

are as follows .-

Laundry, 46 x 32 feet, comprising, on the first floor, washing-room, 30 x 32 feet, provided with three boilers set in bricks, twenty-four stationary wash-tubs, four wash-ing-machines and two wringers; an ironing-room, 12 x 30 feet, provided with brick stove, mangle and sad-irons.

The second floor comprises only one room, 44 x 30 feet, used for drying clothes. A two-story frame building, 42 x 23 feet, comprising school-room, 20 x 12 feet; music-room, 20 x 26 feet carmenter-shop, 20 x 26 feet, and shoe-shop, 12 x 20 feet.

One story frame building, used for recreation, 30 x 20 feet.

Wood-shed, granary and meat-store combined, 25 x 36 fect.

Barn, combined, 84 x 36 feet.

Accommodation.—There is accommodation for forty boys and forty girls, but the school-room and refectory in the boys' school, and the recreation-room, dining-room and sewing-room in the girls' school, are much too small for the number of pupils in daily attendance.

Attendance.—The attendance for the year averages about seventy-nine, that is, 42.05 for the girls and 36.18 for the boys.

Class-room Work.—Marked progress was made in the various branches of study; which chiefly consists of reading, writing, arithmetic, spelling, grammar, geography, dictation, composition, vocal and instrumental music: lessons in calisthenics, gymnastics and dumb-bell exercises are also daily given to the pupils.

The school hours are from 9 to 11.30 a.m., and from 2 to 3 p.m. Besides the regular school hours, the pupils have study from 5 to 6 p.m.

The grading of the pupils is as follows :-

|            | Girls. | Boys |
|------------|--------|------|
| Standard I | . 6    | 8    |
| " II       |        |      |
| " III      | . 11   | 11   |
| " IV       | 7      | 7    |
| " V        | 3      | 7    |
| " VI       | 2      |      |

Industrial Training.—The importance of industrial training has not been lost

sight of, and the results are becoming more and more apparent.

Besides the routine work of washing dishes, sweeping and scrubbing, the boys' duties consist of labour in the field and garden, care of stock, grading roads, planting trees, repairing fences and buildings. The duties of the girls consist of house-cleaning, cooking, baking, laundrying and sewing under the direction of the sisters. It is pleasant to be able to report that both the boys and girls take a great interest in doing their work as perfectly as possible.

Moral and Religious Training.—Special attention is given to the moral and religious training of the pupils. Every morning they assist at mass in the school chapel. School is always opened and closed with prayer. Half an hour every evening is spent in the memorizing of the catechism, hymns and prayers. On the whole, the conduct of the pupils has generally been good.

Health and Sanitary Condition.—The sanitary condition is good, and drainage, on account of the situation of the school, excellent. During the year the majority of the pupils were attacked severely with the grippe or influenza, from the effects of which two deaths occurred.

Water Supply.—An abundance of excellent water is supplied by a mountain stream.

Fire Protection.—Four chemical fire-extinguishers, fireman's axes, ladders and bottests are constantly kept in places of convenient access. The pupils and staff are systematically organized for efficient co-operation in case of fire. Fire practices, with marked progress, are held every Saturday.

Heating .- The heating is done by means of stoves.

Recreation.—Two hours daily, besides Wednesday and Saturday afternoon, are given exclusively to recreation. The boys' chief amusements are football, baseball and swimming. The girls have their own play-ground and play croquet, hand-ball, and go for walks, in charge of a sister.

General Remarks.—In conclusion, I desire to place on record my grateful appreciation of the interest in our work evinced by the Indian Superintendent, Mr. A. W. Yowell, and our good agent, Mr. Devlin, who visited our school and examined the children several times during the year. I beg also to tender my thanks to the members of the staff for their faithful work in the various departments.

I have, &c.,

J. A. BEDARD, O.M.I.,

Principal.

# BRITISH COLUMBIA,

SQUAMISH MISSION BOARDING SCHOOL,

VANCOUVER, July 24, 1900.

The Honourable

The Superintendent General of Indian Affairs, Ottawa.

 $\rm Sm, —I$  have the honour to submit my first annual report for the fiscal year ended June 30, 1900.

Location.—This school is situated on the north shore of Burrard inlet, immediately opposite the city of Vancouver and about four miles distant therefrom.

Buildings.—The main structure consists of entrance hall, parlour, girls' schoolroom, dining-room, boys' school-room, kitchen and store-room, all of which are on the ground floor. The second story is occupied by dormitories for boys and girls and sleeping-rooms for matron and staff, also a small chapel. The outbuildings consist of wood-shed, 35 x16 feet; laundary, 40 x20 feet, and stable, 20 x30 feet.

Land.—The area of land connected with the school is twenty-one acres, and is owned by the Sisters of the Instruction of the Holy Infant Jesus. A nice garden has been cleared and planted by the boys during the past spring and gives us a plentiful supply of vegetables for use of the school, besides giving plenty of healthy exercise to both boys and girls.

Girls' Industrial Work.—The girls have been taught all kinds of housework, knitting, sewing, darning, crochet work and flower-making.

Class-room Work.—This consist of reading, writing, arithmetic, spelling, dictation, geography and vocal music.

Moral and Religious Training.—Religious instruction is daily given to the pupils from 4.30 to 5 p.m. Every morning and evening they have prayers in common; on Sundays and holy days they attend religious service in the parish church. The conduct of all the pupils has been satisfactory during the whole course of the year.

Health and Sanitary Condition.—The health of the pupils has been good and no sickness of any moment occurred amongst them. The sanitary conditions and drainage are excellent.

Water Supply.—Our water supply, whilst not over plentiful, is very good. It is obtained from a small creek a short distance from the school.

Fire Protection.—We have two Stempel fire-extinguishers constantly kept in readiness for use.

Recreation.—The boys spend their recreations in football and baseball, and during summer season in swimming and boating. The girls' amusements are dominoes, chess, skipping ropes, drawing slates and dressing dolls.

General Remarks.—Numerous visitors from Vancouver and New Westminster have inspected the school and seemed pleased with all they saw.

Mr. A. W. Vowell, Indian Superintendent, and Mr. Devlin, Indian agent, came last spring and were satisfied with the good appearance and tidiness of our pupils.

I have, &c.,

E. M. BUNOZ,

Principal.

BRITISH COLUMBIA,

ALL HALLOWS BOARDING SCHOOL,

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Siz,—I have the honour to submit herewith my annual report for the year ended June 30, 1900.

Location.—This school is situated on the right bank of the Fraser river, in the province of British Columbia, about a quarter of a mile below Yale station, on the Canadian Pacific Railway.

Land.—The school stands in about four acres of land, which is held in trust for the mission.

Buildings,—These consist of (a) a large commodious school-house, to which a small wash-house has recently been added; (b) a large additional dormitory; (c) a house for teachers and visitors; (d) a small chapel; and  $(\varepsilon)$  a wood-shed, and the other usual offices.

Accommodation.—The main school building is capable of accommodating twenty-eight girls, and three teachers; the additional dormitory will hold eight or ten girls.

The building of a new wing to the school is in contemplation. This will provide for all the dormitories being under one roof, and will also give a much-needed workroom, and an additional dining-room

Attendance,—All the children attending the school are boarders. Three are at present absent on sick-leave.

Class-room Work.—The school is divided into (a) the upper school, consisting of Standards IV, V, VI, and (b) the lower school, of Standards I, II, III. The viceprincipal, and two English teachers, teach all the usual subjects throughout the school; the matron takes the needlework classes. A few of the elder girls take classes in reading, spelling and arithmetic in the lower school, in order to develop and stimulate their own powers of teaching and influencing others.

Garden.—About two acres of land is laid out in fruit, vegetables and flower gardens. Here the girls are shown the advantages and desirability of paying attention to horticulture in all its branches. They are encouraged to work in the garden whenever it is possible, though the uncertainty of the climate, and the children's own desire for a thorough school education, prevent any great amount of systematic training in this department.

Industries Taught.—These are chiefly such as will best fit the girls to be useful their own homes, or as domestic servants; such as housework (in all its branches), laundry work, bread-making, and simple cookery; also some amount of school teach-

ing and of gardening as mentioned above

Moral and Religious Training—This is most carefully attended to in every respect by those concerned in the children's welfare. A short religious instruction is given almost daily, and the virtues of truthfulness, obedience, honesty, purity, cleanliness, order, self-reliance, self-respect and thrift are constantly inculated and enforced. Though many applications are received begging for girls from this school to be sent as domestic servants to excellent situations, yet they are never allowed to go until we can feel that the moral and religious training they have received here has sufficiently established and strentthened their character.

64 VICTORIA, A. 1901

Health.—Although every possible precaution is taken to admit only apparently healthy children to the school, and although great care is taken of them while here, yet inherited scroffula, or tubercular disease sometimes shows itself in a child even after the lapse of years. The children, in general, show by their cosy, healthy, sturdy appearance what thorough care is taken of them, but they are naturally delicate, and a slight chill often attacks the lungs at once. There were no serious cases of illness in the school during the entire autumn and winter (except a few glandular swellings), but in April about thirty children were attacked by an epidemic of influenza, and one girl has since then had a sharp attack of pneumonia, followed by pleurisy.

Sanitary Condition.—The sanitary condition of the school is very satisfactory,

a mountain stream close to the house.

the drainage having been put into thorough order this spring. Water Supply.—This is plentiful, and excellent in quality, being obtained from

Fire Protection .- This is given by an abundant water supply, laid on in the various buildings, which can readily be utilised by attaching about 150 feet of garden hose to one of the many taps in the house. There are also four Star ûre-extinguishers on the premises. The children are trained to such prompt obedience and are so well disciplined that they have shown themselves capable of rendering very efficient assistance in putting out fires which have occurred near at hand.

Heating .- The buildings are heated by wood and coal stoves, the pipes of which pass through brick chimneys.

Recreation.-A large play-ground has been laid out for the school, containing a swing, and a summer-house, besides a flower garden for each child. Here the children have much healthful play and exercise in fine weather, besides their daily walk of one hour. In bad weather their large play-room is utilised for games and other recreations. The Closing Exercises.—The annual prize-giving takes place in July.

are given for proficiency in scripture, arithmetic, and other school subjects, also for bread-making, and for excellence in other household duties. A silver medal is awarded for good conduct. The closing exercises consist of music, songs, marching. recitations, a musical drill, and other items of interest, all carefully prepared by pupils and teachers, and at which friends and acquaintances are invited to be present.

A Wedding .- One of the elder girls was honourably married from the school this spring to a young Indian from the Lower Fraser. The chief spoke very well of his character, and the friends on both sides seemed much pleased by the marriage. I have, &c.,

AMY, SISTER SUPERIOR,

C. A. H.

BRITISH COLUMBIA. ALERT BAY INDUSTRIAL SCHOOL, ALERT BAY, August 6, 1900.

The Honourable

The Superintendent General of Indian Affairs, Ottawa.

Sm,-I have the honour to submit my annual report of the Alert Bay industria school, together with an inventory of government property under my charge, for the fiscal year ended June 30, 1900.

Location.—The industrial school is healthily situated on rising ground, at the extreme west end of Alert bay, and commands a very pleasant view seaward, and is also sheltered from northerly winds.

The land connected with the school comprises four hundred and ten acres of thick bush, six of which have been cleared by the pupils, with a small amount of outside help.

Buildings.—The school building is of wood, 60 x 40 feet, tastefully and strongly erected, with plastered walls and light, lofty, airy rooms.

Attached to the main building is a wing, 54x18 feet, comprising workshop and play-room; the outer buildings comprise laundry, cow-shed, small wood-shed, roothouse, a hen-house and run, and large wood-shed, 60x30 feet; the last three-named were erected by the pupils. There are also six dry-earth closets.

Accommodation.—There is ample accommodation for twenty-five pupils, and in twent of that number increasing, a large loft in the top of the building could easily be converted into a comfortable bed-room for another ten pupils, thus reaching the authorized number of thirty-five.

Attendance —The attendance, I am pleased to state, has increased slightly during the year, the number on the roll being twenty-eight. The pupils were graded as follows:—

| Standard | Ι   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 5 |
|----------|-----|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| 66       | Π.  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 5 |
| cc       | Ш   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 7 |
| 66       | IV. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 8 |
| cc       | V   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 3 |

Class-room Work.—The work in the class-room has been most satisfactory and encouraging. The boys have striven hard to learn, and marked improvement has been made in reading, spelling, arithmetic and English.

Conduct.—The conduct juring the whole year has been particularly good. The pupils have, without exception, behaved well in class.

Industrial Work.—All the boys have helped in the general housework and washing, and most of them have taken pride in doing well the portion of work allotted to each. In the carpenter's shop twelve boys have received regular instruction, and five of them have excelled in this branch of work. These boys, with their teacher, have erected a cottage near the school for the use of the trades instructor.

Religious Instruction.—Morning and evening prayer is said daily in the diningroom, and a Bible lesson is given every morning to each class. The pupils are continually taught the necessity and advantage of cleanliness and purity of mind and body, and a continuous supervision is exercised over them from morning to night.

Health.—The health of the boys has been good. We are indeed thankful for this, especially so, as there has been so much sickness in the village.

Sanitary Condition.—The sanitary condition is satisfactory. A good drain carries the water from the kitchen, lavatory, bath-rooms and laundry to the sea. Disinfectants are regularly used, floors often scrubbed, garbage and refuse matter burned and ventilation properly attended to.

Water Supply.—Water is supplied to the house from a well near by. The water is pumped up daily into a large tank by the pupils, which is regularly cleaned.

Fire Protection.—All necessary precautions are taken against fire. A ladder is

kept ready for use. Twenty-four fire buckets and four Star extinguishers are kept on hand. A fire hose 100 feet long is ready for use, and the pupils are adept in having the water in play in a very short time. Fire drill is practised in accordance with the desire of the department.

Heating.—The heating is all done by means of stoves. Chimneys and flues are kept clean.

Recreation.—The boys spend most (f their recreation time in football, of which they are very fond. They also play chess, draughts, parlour croquet and

crokinole in the winter evenings. They are kept well supplied with toys, picture books, &c. A brass band is a desideratum which will be filled as soon as our means

noumit

Girls' Department.—The girls of the Girls' Home have been under the care of Miss Carleton. Eight girls have been in residence. They have been admirably taught all the branches of housework, and the class-room work has been under the care of Miss Edwards, a most efficient teacher.

General Remarks.—The Bishop of Caledonia has appointed Miss Loxton Edwards to be assistant matron, for whose help I have to thank the Church Missionary Society. My thanks are also given to Indian Agent Pideoca, for his kindly visits to the institutions and many encouraging words given to the pupils. Mr. Halliday, the trades instructor, has been a great help in teaching the boys in Sunday school.

I have, &c.,

A. W. CORKER, Principal.

CHILLIWACE, August 23, 1900.

BRITISH COLUMBIA, COQUALEETZA INDUSTRIAL INSTITUTE,

The Hanamahl

The Superintendent General of Indian Affairs,

Ottawa

Sir.-I have the honour to submit my annual report for the year ended June 30, 1900.

Location.—Our institute is situated on the right bank of the Luceucuk river, three miles from the town of Chilliwack, which is accessible by two lines of steamers from New Westminster giving a daily service, Sunday excepted, and also by the Canadian Pacific Railway via Harrison station, from thence by steamer to Chilliwack landing.

Land.—We have now ninety acres of excellent land, which is held by the missionary society of the Methodist Church for the use of the institute, for which we pay an annual rental of \$390.

Buildings .- These are as follows:-(1) the institute proper, a three story brick structure, of imposing appearance, well lighted and ventilated, erected by the missionary society of the Methodist Church for institute purposes, at a cost, including furnishings, of about \$25,000, towards which the Indian Department contributed \$5,000. The first floor is raised about five feet from the land level so as to admit of the basement being well lighted, and is approached by convenient steps at the two front entrances, leading to halls nine feet wide extending from the front to the rear porches of the building, a distance of forty feet, from which steps again descend to the boys' and girls' yards, respectively. These two halls with others similarly situated on the second and third floors divide two wings of the building from the central portion. The latter, including the kitchen annex, at the rear, and the tower at the front. has an extreme width of 63 feet. The main room of this portion is the children's dining-room, 24x41 feet, containing ten tables transversely placed, capable of occommodating over one hundred pupils. At the rear of the dining-room is the kitchen, 18 x 224 feet, off which are two pantries, one 7 x 9 feet, used in connection with the teachers' dining-room, and the other, 9 x 17 feet, used with the children's dining-room. At the front of the children's dining-room is the tower, con-

taining on this floor the principal's office, 7½ x11½ feet, and a hall with stairs leading to the second and third floors. The right wing contains a sitting-room, 1½ x 1½ feet, with a bed-room off, 10 x 1½ feet; teachers' dining-room, 1½ x 19 feet, and a dressmaking-room, 1½ x 21 feet. The left wing contains a sitting-room, 1½ x 13 feet, with a bed-room off, 10 x 12 feet; a sewing-room, 1½ x 21 feet, and a store-room adjoining, 9 x 21 feet.

The main room on the second floor is the school-room, which occupies the entire breadth of the central portion of the building, as does the childrens' dhing-room on the first floor, and is the same size, viz.,  $24 \times 41$  feet. To the rear of the school-room are three bed-rooms over the kitchen, sizes respectively,  $13\frac{1}{2} \times 8\frac{1}{2}$  feet,  $14\frac{1}{2} \times 8\frac{1}{2}$  feet, and  $10 \times 11\frac{1}{2}$  feet; also a bath-room,  $6 \times 9\frac{1}{2}$  feet. The right wing on this floor contains boys' dormitory No. 1,  $40 \times 21$  feet, with a capacity for twenty-four beds, and a teacher's bed-room,  $17 \times 13$  feet. Similarly the left wing contains girls' dormitory No. 1,  $40 \times 21$  feet, with a capacity for twenty-four beds, and a teacher's bed-room,  $13 \times 94$  feet. Adjacent to the dormitories on each side is a store-room for clothing and bedding when not in use.

The third floor contains dormitories and teachers' rooms, and additional storerooms for clothing and bedding. The boys' dormitories on this flat are No. 2, 24 x40 feet, with a capacity for twenty-one beds, and No. 3, 12 x 20 feet, with a capacity for eight bods; also three teachers' rooms, 9 x13, sx11, and 11 x11 feet. The girls' dormitories are identical in size with the boys, viz, No. 2, 21 x 40 feet, with a capacity for twenty-one beds, and No. 3, 12 x 20 feet, with a capacity for eight beds, and three teachers' rooms, 9 x13, 8 x11, and 11 x11 feet respectively.

Total capacity of dormitories, one hundred and six, and rooms for staff, 13.

The basement occupying the entire area under the building contains:

Two lavatories, each 11 x 20 feet, having seven bowls and two bath-rooms.

Two furnace-rooms, which are also halls by which access is had to the recreationrooms, the laundry, lavatories, and dry-air water-closets. Size on the boys' side,  $16\frac{1}{2}$  x 40 feet, on the girls' side,  $8\uparrow$  x 40 feet, or

Laundry-room, 29½ x 31½ feet, extreme width. Dairy, 22½ x 18 feet.

Smead-Dowd water-closets, 10 x 31½ feet.

Scullery, 6½ x 22½ feet.

(2) Two barns; one exclusively for hay and grain, 50 x 64 feet; the other, 48 x 52 feet, contains horse and cow stables, a capacious root-cellar, a granary, a harness-

room, and a carriage and implement room.

(3) A kindergarien bilding, 28 x 40 feet, admirably adapted for its purpose, where also the band instruments are kept, and where the band have their practices and receive their instruction.

(4) A frame, one-story cottage, 26 x 34 feet, occupied by the farm instructor's family.

(5) A frame building, 20 x 75 feet, containing in its different parts shoe shop, carpenter shop, wood-shed, a brick-lined root-cellar and a flour-room. A portion of this building has been fitted up during the year for a drying-room.

(6) A granary has also been completed, having become necessary to hold the grain raised this year on our farm, and in which this season's crop is actually garnered size, 20 x 30 feet.

(7) A shed, 24 x 35 feet, has also been put up to protect wagons and other agricultural implements from the weather.

(8) Other minor buildings are: a tank-house, containing a tank of two hundred and forty barrels capacity, for rain water for use in the laundry; a windmill with inclosed building, containing a one-hundred barrel tank, from which the kitchen and lavatories are supplied; a hen-house, 12 x 16 feet; a bake-house, 12 x 16 feet, and a

rig-pen.

Attendance.—The total attendance during the year has been one hundred and en pupils, with an average for the year of over eighty-four. Fifteen were received,

forced. Religious instruc for the purpose on Tuesda day from 9.30 to 10.30 a.m school daily. All the chilchurch in the neighborh 7.30 p.m. (the smaller child by their consistent lives having undergone a change

Ten of the larger girls have been learning music during the year. Some of these can lead the singing at the organ in a religious service very acceptably. Too much cannot be said in praise of the advantages of the kindergarten system for quite young children: in the words of the Hon. Geo. W. Ross, 'By an easy transition, scarcely perceptible to the child, the kindergarten leads naturally from the nursery to the school-room. Its work is congenial, its discipline kindly, and its methods in harmony with child-nature. No school system can be said to be properly organized that is not founded upon the kindergarten.'

Farm and Garden.-The past season was highly favourable in respect to the produce of the farm and also of the garden. Our yield of hav was excellent, averaging not far short of three tons to the acre. After retaining sufficient for home consumption, we disposed of over one hundred tons, most of which brought ten dollars per ton. Of other produce the yield was about as follows: oats, three tons; pease, two tons; turnips, eight tons; carrots, eight tons; mangolds, thirty-four tons, and potatoes, twenty tons.

Industries Taught .- In accordance with the policy of the Indian Department, the first place is given to farm and garden work. A few of the boys learn shoemaking. Some are selected to assist in doing such carpenter work as has to be done about the premises, and in the use of the more common tools they acquire considerable skill. Three of the larger boys did fifty-six days' work at painting on the institute building last autumn. The work was as satisfactory as that done by the painter who had the work in charge. We want that our boys shall be generally handy-men of all work-as being best suited to the conditions of this country. Hence they are taught the care of their own rooms, washing their own clothes, preparing vegetables for meals, and cooking them, scrubbing floors, baking bread, besides all the different parts of farm and garden work, care of stock, &c. The boys and girls both need to be trained especially in habits of diligence, orderliness, promptness, thoroughness, and thrift. If we are successful in establishing these qualities as abiding elements in character, we shall have accomplished much. This is a work which requires years of patient and painstaking effort, and is greatly facilitated by being commenced when the subject is quite young, and by being begun in the kindergarten room. dustrial training of the girls includes housework in all its branches such as care of rooms, scrubbing, cooking, and laundry work; also sewing, knitting and baking. Upon these essentials of housekeeping we lay especial stress. To fit the girls for the common duties of the home should, we feel, be our first care. The larger girls are taught fancy needlework, dressmaking, and the finer kinds of baking and cooking. Again we have the gratification of reporting success in the competition for prizes at the agricultural exhibitions held last autumn at Chilliwack and at New Westminster. As in previous years, our boys and girls were successful against all comers in carrying off many prizes.

Moral and Religious Training.—To this most important duty the utmost attention is given. The importance of kindness, honesty, truthfulness, temperance, and reverence for God and sacred things, is constantly urged and their observance enforced. Religious instruction is imparted daily in the schools, and in meetings held for the purpose on Tuesday evening of each week. Substabl school is held each Lord's day from 9.30 to 10.30 a.m. Morning and evening worship is conducted for the whole school daily. All the children attend divine service at either the Indian or the white church in the neighborhood in the afternoon, and the larger ones at the institute at 7.30 p.m. (the smaller children having retired for the night). Several of the children by their consistent lives and humble profession of faith in Christ give evidence of having undergone a change of heart.

Health and Sanitary Condition.—The health of the pupils has been, during the past year, exceptionally good. Three of the children have died through the development of inherited tendencies undetected and presumably undetectable at the time of their admission to the institute. Every care is taken to maintain the most healthful conditions by securing good ventilation, supplying wholesome food and plenty of it, and by frequent fumigations and the liberal use of disinfectants where any unsanitary conditions may be suspected to exist.

Water Supply.—This is drawn from a barrel sunk in the gravel near the bod of the Lucucuck river, into which the water filters from the river; from thence it is pumped by a windmill into an elevated tank and conveyed to the house through pipes. The supply is abundant, and even before being filtered is excellent in quality.

Fire Protection,—This consists in (1) the building being of brick, (2) fire-escapes at the windows, (3) a plentiful supply of water, (4) barrels of water kept in the halls, and a supply of fire buckets within easy reach in case of need, (3) Carr chemical engines, furnished by the department, (6) fireman's axes also supplied by the department, and based where they may be instantly had in case of need.

Heating.—The building is heated with hot air, the Smead-Dowd system being used.

Recreation.—A portion of each day is set apart for recreation, which is utilized with great heartiness, principally in the play-grounds, but indo as in the play-rooms when the weather is had. With the boys the popular amusement at present is football, which they sometimes play with the young men of the vicinity, who are pleased to have our boys share their sports with them. Half-holidays are frequently given the pupils and social evenings are arranged for, which they very much enjoy. Checkers, crekinole, and the like, they indulge in occasionally, but the mor active outdoor games they prefer. But the band is of all others the recreation in which the members take the chief delight. Under the skilful leadership of Mr. R. Marshall, they are attaining proficiency which excites general remark. Scarcely a garden party is given by any of the churches in the settlement but our band is engaged to furnish music. We are pleased with this; for we feel that the more our children are brought into contact with the right kind of white people, the better it is for them, and the more sympathy is felt for them, and for the work which we are striving to do.

General Remarks.—It is right that I should in my annual report acknowledge, as I gratefully do, the uniform courtery and promptness of the Indian Superintendent in dealing with all matters which it becomes my duty to bring before him. His visits are also looked forward to with much pleasure as occasions of much interest and profit. They invariably do good. We owe much also to the energetic agent of the Fraser River agency for his zealous co-operation to enforce the policy of the department, and to make our institute subserve in the highest degree the good of the Indian race.

I have, &c., JOSEPH HALL.

KAMLOOPS, July 17, 1900.

#### British Columbia, Kamloops Industrial School,

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Sir,—I have the honour to forward my annual report for the fiscal year ended June 30, 1900.

Location.—The Kambops industrial school is situated on the northern bank of the South Thompson river, about two miles east of Kambops city, a station of the Canadian Pacific Railway.

Land.—In connection with the school an area of land of three hundred and twenty acres was surrendered to the school by the Indians of Kamloops reserve. It is a narrow strip of land, extending for about two miles along the river. The greater part of it is unfit for cultivation, owing to the sandy or gravelly nature of the soil or to the want of water for irrigation; it affords but seasity posture to the few animals owned by the institution. There is no timber available for fuel; all the fire-wood has to be purchase.

Grounds.—The boys and girls have separate play-grounds, inclosed by picket fences. The grounds are kept as neatly as possible; but we are bailled every year in our efforts to improve them by the planting of shade trees; the scarcity of water and the high winds prevalent here are the causes of the failure.

Buildings.—The buildings are in good condition, and some of them have been repainted lately, inside and outside. They are as follows:—

- 1. The main buildings, 34 x 30 feet, with an extension 52 x 18 feet. The ground floor contains:
  - (a.) The parlour, 12 feet 6 inches x 12 feet 6 inches.
  - (b.) The office, 13 x 13 feet.
  - (c.) A bed-room, 9 x 9 feet.
  - (d.) The pantry, 10 x 6 feet.
  - (e.) The kitchen, 16 x 16 feet.
  - (f.) The laundry, 30 x 18 feet, with four bath-rooms and bake oven.
  - On the second floor are:
  - (a.) The small girls' dormitory, 32 x 15 feet.
  - (b.) The girls' school-rooms, 32 x 14 feet and 22 x 14 feet.
    - (c.) The chapel, 30 x 17 feet.
- 2. The girls' home,  $30 \times 22$  feet, with an addition in course of erection,  $34 \times 22$  feet. On the first floor are:
  - (a.) The girls' sewing-room, 21 x 15 feet.
  - (b.) The sisters' dining-room, 13 x 12 feet.
  - (c.) A bed-room, 9 x 9 feet.
  - On the second floor there are:
  - (a.) The big girls' dormitory, 28 x 11 feet and 12 x 9 feet.
  - (b.) The teacher's bed-room, 9 x 8 feet.
  - The new addition will contain on the first floor:
  - (a.) The girls' recreation-room, 22 x 21 feet.
  - (b.) A small parlour, 9 x 9 feet.(c.) A store-room, with stairs, 12 x 9 feet.

On the second floor will be a girls' dormitory, 34 x 22 feet.

3. The boys' home, 40 x 33 feet, with an addition, 30 x 18 feet.

The ground floor contains:

(a.) A bed-room for the instructor, 12 x 11 feet 6 inches.

(b.) A music-room, 12 x 12 feet.

(c.) A clothes-room, 13 feet 6 inches x 12 feet 6 inches.

(d.) A provision-room, 12 x 10 feet. (e.) The boys' lavatory, 12 x 19 feet.

(f.) Two recreation-rooms, 18 x 12 feet and 30 x 17 feet.

- On the second floor are:
- (a.) The boys' dormitory, of irregular dimensions; part of it is 28 x 12 feet and part of it 22 x 18 feet. (b.) A sick-room, 12 x 12 feet.

(c.) The principal's bed-room, 12 x 9 feet.

- (d,) The boys' school-room, 30 x 17 feet.
- 4. Carpenter and shoemaker shops, 60 x 20 feet.

5. Wood-shed, 30 x 10 feet.

- 6. Cow stable, 40 x 24 feet, with a root cellar, 24 x 10 feet.
- 7. Barn and horse stable, 40 x 20 feet, with two additions, each 20 x 10 feet, one for tool-shed and the other for hen-house.

8. Cellar, 24 x 16 feet.

- 9. Pump-house, about 18 x 8 feet.
- 10. Dairy and ice-house, 22 x 16 feet.
- 11. Three-roomed cottage for employees, 24 x 20 feet.

12. Girls' summer-house, 16 x 16 feet.

13. Windmill, near the garden.

14. Water tanks: one near the laundry, of a capacity of eighteen hundred gallons; another, of a capacity of twelve hundred gallons, has been erected this summer on a tower, about 34 feet high, situated between the main buildings and the boys' home. From the ground to the top of the vane surmounting the tank-house the height is about fifty feet. The whole presents a fine appearance.

Accommodation.—The school can accommodate sixty pupils and seven officers.

Attendance.-Twenty-five boys and twenty-five girls were on the roll this year; the average attendance was nearly fifty. Seven boys and five girls were discharged by the department; five girls and six boys were admitted.

Class-room Work .- The school hours for the boys were, in the morning, from 8.45 till 12 noon, and in the afternoon, from 4.45 till 6.15. The girls attended school from 2.00 till 5.00 in the afternoon, and had half an hour's study in the evening. The progress of the girls in their studies was very gratifying, whilst the boys have improved greatly, particularly in mental arithmetic. At the end of the year the pupils were graded as follows:-

| Standard | п   | . 14 |
|----------|-----|------|
| 66       | III | . 1  |
| 44       | IV  | . 20 |
| 66       | V   | . 5  |
| ce       | VI  | . 10 |

Farm and Garden.-Farming cannot be conducted on a large scale. There are about ten acres of good bottom land, but they are subject to the periodical overflows of the Thompson river. The garden, containing three acres, is the only part of that land which can be protected against the high water, and to do this, we had to build a dyke three hundred and fifty feet long, ten feet wide and from two to five feet high. The product of the garden last fall was not as good as usual; however, we had an ample supply of roots and vegetables for the institution. At this date the crops, comprising potatoes, pease, beans, beets, carrots, onions, corn, tomatoes, cabbages, look well, though they suffered somewhat from the cut-worms and potato bugs; the application of insecticides was found necessary and successful. A field, containing two acres, on which was growing a very promising crop of

wheat, was overflown late in June, and the crop was destroyed.

One mile east of the buildings there is some good land, but water for irrigation cannot be brought on there without great expense. However, the alfalfa sown there a few years ago continues to turn out well.

All the boys do farm and garden work. The windmill is kept in good running order, but does not give a sufficient supply of water for irrigation; and we have trouble sometimes in getting water from the Indians' irrigation ditch.

Live Stock .- At the present time our stock consists of four horses and one mare which, I fear, is permanently injured; four milch cows, one heifer and three calves, We cannot keep a larger number.

Industries Taught.-Carpentering.-Eleven boys have received more or less instruction in this trade. They have built an addition to the girls' home, 34 x 22 feet, two stories high; they have made also a platform and desk for the girls' teacher, and two wash-stands.

Painting.-Four boys have been employed at painting in the spring and early summer. They painted the new building, repainted the boys' home, wood-shed and picket fence, the shops, the stable and part of the main building.

Shoemaking .- Four boys were engaged in this branch; they did creditably all the repairing, which is considerable.

Girls' Work .- The girls learn all kinds of housework, hand and machine sewing, plain and fancy needlework, crochet work and the making of lace. They make all their clothing and part of the boys' clothing.

Moral and Religious Training.-Religious instruction is given daily for half an hour. We keep constantly before the mind of the pupils the object which the government has in view in carrying on the industrial schools, which is to civilize the Indians and to make them good, useful and law-abiding members of society. A continuous supervision is exercised over them, and no infraction of the rules of morality and good manners is left without due correction.

Health and Sanitary Condition .- During the summer holidays of 1899, many pupils caught the measles while at home; some were unable to return at the time appointed, others returned in an enfeebled state, but they soon recovered at the school their usual good health. With the exception of two girls, who are a little delicate, the pupils have enjoyed excellent health during the whole year. The sanitary condition is satisfactory. A drain 350 feet long and 3 feet deep conveys the water from the kitchen and laundry to the river. Lye and phenole are used as disinfectants. Garbage and refuse matter are not permitted to remain on the premises. Ventilation is properly attended to.

Water Supply.-Water is supplied to the house from a well dug near the river. The pump is operated by horse-power, and the water is kept in a tank, placed near the laundry. The tank is lined inside with galvanized iron and covered all around with sawdust. Thus the water is kept fresh and pure from all pollution.

Fire Protection .-- The fire-appliances on hand are as follows:-1. Four chemical extinguishers, furnished by the department,

2. Two fireman's axes, also supplied by the department.

3. Three strong ladders, permanently attached to the buildings; three long ladders and a few smaller ones kept in proximity to the buildings, the small ones to be used inside the house in case of necessity.

4. One or two buckets full of water kept in the rooms wherever a stove is placed. Six fire buckets in the boys' building, besides a number of others which are also used for other purposes. In the laundry, a dozen buckets or more always on hand.

5. One water tank near the laundry, of a capacity of eighteen hundred gallons, with three taps, but as there is not sufficient pressure, hose cannot be used in connection with them, and the water would have to be carried off in buckets. It is to remedy this inconvenience that another tank of a capacity of about twelve hundred gallons has just been erected on a tower as high as the highest buildings. This tank is to be filled from the never-failing well near the river, and the water is to be used only in case of fire. The hose to be connected with this tank will be 12 inch; it has been ordered, but has not come to hand yet, and we could not try the pressure,

Heating .- Only ordinary box stoves are used for this purpose.

Recreation .- The pupils have about half an hour in the morning, half an hour at noon, and from 6.30 p.m. till bedtime. The principal outdoor games are football and baseball; swimming in summer, skating and coasting in winter are much enjoyed by the pupils.

The girls indulge in the ordinary amusements suitable to their sex, swinging, skipping, &c. Some of them are fond of reading. The brass band provides for the boys another form of recreation.

General Remarks.-The pupils who were discharged at the beginning of the year, on the whole, are doing well. Some are working on farms and others on the railroad In closing this report, I wish to express my high appreciation of the interest

taken in our school by Mr. Vowell, Indian Superintendent, who, in his official visits, examined the children and appeared well pleased with the progress made by them and with their healthy appearance. I would also acknowledge with pleasure the promptness of Agent Irwin in giving me every assistance.

I am. &c.,

A. M. CARION, O.M.I.,

Principal

BRITISH COLUMBIA.

KOOTENAY INDUSTRIAL SCHOOL, St. Eugene P. O., July 2, 1900.

The Honourable

The Superintendent General of Indian Affairs, Ottawa.

Sir. I have the honour to submit my annual report for the year ended June 30, 1900,

Location .- The position of this school in the valley of the St. Mary's, is both pleasant and salubrious. The mountain breezes temper the heats of summer, and the giant expansion of foot-hills, protect it from the fierce gales of winter, elsewhere experienced. The bordering fields, and grassy bench-land, are in spring and summer dotted with a profusion of wild flowers that the Indian children love to gather to decorate school and shrine.

Buildings .- The main building is a neat dwelling of eight compartments, commodiously apportioned. Its appearance has been much beautified by the erection of a cupola, to serve as a receptacle for our bell lately received, and which rings out the call for rouse, prayer, meals, labour and rest. To the right is the girls' house, and to the left the boys'. Both are partitioned off into recreation-room, dining-room, dormitory, lavatory, and fine wardrobes are stationed in convenient places along the walls. Built on to the boys' recreation-room, is a large school-room, 25 x 20 feet. It is well lighted and ventilated. The upper story is the large boys' sleeping apartment. The girls' class-room is in the main building. The foreman's house, bakery, laundry, dairy, meat-house, barns, stables, and shoe-shop are in good repair, and answer fairly well their intended purposes. The ice-room between meat-house and dairy, is found most convenient, as it keeps those two compartments cool during summer, and insures safe storage of meat, butter, and other articles of food.

Grounds.—The dwellings are surrounded by spacious and well kept grounds, and in them flower beds are laid out and carefully attended to by the children.

Accommodation.—The enlargement of the recreation-rooms added greatly to the enjoyment of winter hours, as these apartments are now sufficiently large to admit of suitable indoor games. The boys' department could accommodate thirty-five pupils, and the girls' twenty-five.

Class-room Work.—So as to utilize every moment of the half-day school system, two teachers were engaged with the boys in the forenoon, and two with the girls in the afternoon; thus it could be ascertained that all were well occupied. After the recitation of lessons, according to government programme, as much time as could be spared was given to mental arithmetic and work on the blackboard. This was frequently varied with composition and general knowledge questions.

Most of the children applied their minds well to their studies, and evinced a real desire of advancing. A great stimulus to them was the reading out of their good marks at the beginning of each month. Knowing that attention is the criterion of the scholar, every effort was made to have lessons interesting and instructive, and the pains taken by the teachers, were in a large measure compensated by the visible progress made.

The grading of pupils is as follows :-

| Standard |     |    |      |  |  | . 11 |   |
|----------|-----|----|------|--|--|------|---|
| 44       | Π   |    |      |  |  | . 4  |   |
| cc       | III |    |      |  |  | 15   |   |
| 66       | [V  |    |      |  |  | . 11 |   |
| cc       | V   |    |      |  |  | 10   | į |
| 66       | VI  | ١. | <br> |  |  | . 4  |   |
|          |     |    |      |  |  |      |   |

The brass band continues to be a leading feature of interest to the school. The boys generally practised from one to two in the afternoon, and that hour was to them one of real enjoyment. I was requested to bring the members of the band to Moyie for the Queen's Birthday celebration. They played in the intervals between the different games, and by their excellent music contributed much to the pleasantness of the day. Their deportment during their absence was gentlemanly, and reflected honour on the school.

Visits.—During vacation Mr. Yowell, Indian Superintendent, paid us a visit, and although he took us by surprise, our pupils gave him quite a creditable entertainment. This gentleman seemed well pleased with everything in and about the school. Mr. Galbraith came frequently to see the children, and was always warmly received by them and the staff. Every year he makes our pupils a generous donation at Christmas, to be disposed of according to their pleasure. They generally make use of it to increase the volumes of their library.

Farm and Garden.—Our farm is in a flourishing condition. The fields are need off with logs, and have strong well-made gates, that were put up by the boys and foreman.

Each year several acres of eleared land are added to our tillage. It is only bottom land that here requires much elearing, and this entails no small amount of labour, as the under-brush is very thick; but work once completed, we are amply repaid by the fertility of the soil, and the little irrigation required, as seepage from the creek and the St. Mary's river are almost sufficient.

Being convinced by experience that roots make excellent fodder for milch cows, we considerably augmented our garden acreage, which is sown in mangolds, turnips, carrots, beets, parsnips, onions, celery, sweet pease, &c.

Orchard.—We have about one hundred and fifty healthy-looking apple-trees, and fifteen, or thereabout, that have been bearing well for the last couple of years. We

are also having splendid success with our small fruits.

Industries.—Farming.—The high land differs greatly from the bottom land, as its permeable soil absorbs moisture with great rapidity, and therefore necessitates daily irrigation during dry weather. This, together with hoeing potatoes, weeding garden, and clearing land, supplied the farmers with work after the crops were put in, until it was time for haying and harvesting. Taking out vegetables and cellaring them, took up a large portion of their time in autumn, after which they did the threshing and fall ploughing, and this was followed by work in the woods, felling trees and hauling them out. As from twelve to fifteen stows were in use during our long cold winter, a great deal of fire-wood had to be got out, and preparing it for use gave the boys plenty of muscular exercise.

Carpentering.—Very little carpentering was done about the premises except the occasional making or repairing of some article of furniture, the putting up of a

belfry, and a porch at the kitchen door.

Girls' Industries.—The girls are steadily acquiring a more thorough spirit of order and cleanliness, and like the slow current that glides silently along and never intermits its course, though its movement is almost imperceptible, they by habits of civilization constantly practised, are becoming more and more competent in the art of housekeeping. Every morning immediately after breakfast they went to their appointed work of putting the different apartments in order, helping in kitchen or bakery, according as they were told off. During this time the little ones cleaned the yard and watered the flower garden. At eight all were expected to be ready to begin lance of an able seamstress they were engaged at that occupation until eleven o'clock. They were taught to cut and fit dresses, and to make all kinds of underwear, to mend, darn, knit, and to do various kinds of fancy work.

Moral and Religious Training.—The pupils were at all times under the care of some one of the staff, whose aim was to train them to a love of duty, and a faithful discharge of their obligations to God and man, not through fear of punishment, but through a sense of moral rectitude, so that at the completion of their education their religious training shall have become part and parcel of their existence. No pains were spared to plant and develop principles of virtue, that render their educations op profitable to them. It was most encouraging to witness with what attention they applied themselves to the study of Christian doctrines, thus to become thoroughly grounded in the truths of religion.

Water Supply.—A plentiful supply of water is obtained from two wells, one in the kitchen yard and the other in the bosy play-ground. Although this water is excellent for drinking and kitchen use, it is rather hard for laundry purposes, and difficult to be procured in case of fire. Our Indian agent has laid plans to have water brought from the creek, from a high point to supply all the wants of the house by gravitation.

Fire Protection.—Chemical fire-extinguishers are stationed at convenient places throughout the building. Saturday of each week is the day appointed in our institution, for drilling our pupils in the use of fire-extinguishing appliances. Then all available buckets and hose are called into action.

Heating .- Our houses are heated entirely by wood stoves.

Recreation.—Last summer both boys and girls had a pleasant outing during vacation, the former in the vicinity of North Star Mine, where they hunted, fished, picked

27-i-28

64 VICTORIA, A. 1901

berries, and spent a most enjoyable time. They brought home with them large quanti-

ties of berries that were prepared for keeping. The girls spent a delightful time in the neighbourhood of Bull river, gathering gum, berrying, and otherwise amusing themselves among the spicy pines and cedars. During their stay, an agreeable recreation to them was to watch the grandeur of the Bull River canyon, as in its spray, glittering in the sunlight, gorgeous rainbows were reflected. A source of great amusement to our pupils is a phonograph, which enabled them to pass pleasantly many leisure hours.

I have, &c., N. COCCOLA, Principal.

British Columbia. KUPER ISLAND INDUSTRIAL SCHOOL, KUPER ISLAND P.O., July 2, 1900.

The Honourable

Ottawa.

Sir,-I have the honour to transmit my annual report for the fiscal year ended

Location.—The Kuper Island industrial school is situated in Telegraph bay, on the southwest side of Kuper island, Stuart channel, about five miles from Chemainus station, Vancouver island. The surroundings of the school are most beautiful, the sea

and evergreen forest adding to the pleasantness of the locality. Land .- About seventy acres of land belong to the school. The quality of the soil is fair, and a considerable portion is covered with heavy timber,

Fruit Trees.—Besides the numerous shade trees, such as maples, linden, elms, acacias, walnuts, wild chestnuts, jumpers, hollies and mountain ash, which surround the buildings and play-grounds, about one hundred and eighty fruit trees have been planted, and are in a thriving condition. Our grape-vines are already yielding abundant erops.

Buildings.—The buildings, which stand in two rows and command a magnificent view from the sea, are kept in excellent condition. Since my last report all the buildings have been repainted inside and outside. The general appearance of the school looks like a compact village, composed of sixteen separate buildings, whose dimensions are as follows :-

Lower row, left side. -1. Bakery, 25 x 16 feet, with modern brick oven, 8 x 6 feet.

2. Wood-shed, for bakery and laundry, 19 x 10 feet.

3. Laundry, 40 x 20 feet, containing one furnace and two boilers, also closets for soap, soiled and elean linen. 4. Girls' home, 40 x 32 feet, the ground floor of which is used for a sewing-room,

infirmary for girls and store-room; the upper flat contains dormitory for senior girls, 40 x 32 feet, linen and bath rooms, with a room for the matron. 5. A building, 24 x 22 feet, used as recreation and sitting rooms on the first floor,

and sleeping-rooms for teacher, cook and assistant matron, with dormitory, 24 x 18 feet, for junior girls, on the second floor.

6. Main buildings, 32 x 30 feet, and an extension, 48 x 18 feet. The ground floor contains parlour, office, boys' dining-room, kitchen, pantry and girls' dining-room, with a cellar under the boys' dining-room. The second floor is used for girls' school-room,

music-hall, chapel and two spare rooms. These last three buildings are connected by a corridor.

7. Dairy, with modern improvements, 20 x 14 feet.

8. Wood-shed, for kitchen and house, 60 x 20 feet, with tool and oil compartments.

9. Boys' home, 87 x 33 feet. On the lower floor are the boys' infirmary, the store-

room for provisions and clothing, the band and shoemaker's room, the lavatory, the boys' play-hall and school-room. The upper floor is used for boys' dormitory, 78 x 23 feet, linen-room, as well as for the principal's, teacher's and foreman's bed-rooms.

10. Boat-house, which is located alongside the wharf, is 30 x 20 feet, and shelters our boats.

11. Gymnasium, 50 x 20 feet. This building is also used for concerts and entertainments.

Water-tank. On the hill at the rear of the boys' home there is a twelve-hundred-gallon tank; the hydraulic ram-house is built on the beach.

13. Carpenter and shoemaker shops, 40 x 20 feet.

14. Lumber-shed, 30 x 10 feet.

15. Stables, pig-sty and hen-house, 36 x 20 feet.

16. Barn and implement shed, 52 x 22 feet, with a lcan-to, 82 x 10 feet.

Accommodation.—The school can accommodate seventy-five pupils and a staff of eight officers.

Attendance.—The average attendance during the year was over sixty-three.

Class-room Work.—The boys who are learning a trade have half a day at school and half a day at work. The junior pupils have six hours at school a day. Gratifying progress was made in the school-room. The boys and girls have separate class-rooms, with a teacher for each school. In order to stimulate emulation, general examinations are held.

At the end of the fiscal year the pupils were graded as follows :-

| tandard |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
|---------|-----|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|---|
| 66      | II. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | 3 |
| 14      | III |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 | 5 |
|         | ĪΥ  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 | 8 |
|         |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |
|         | M   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | 9 |
|         |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |

Total number of pupils (consisting of 39 boys and 30 girls).. 69

Farm and Garden.—Nearly all the mele pupils take lessons in gardening; the smaller ones have charge of the flower gardens. All the senior boys, when not engaged in the shops, work on the farm. This summer our crops have a promising appearance, with the exception, however, of our late potatoes, which have been damaged by the wet season. At the present time our stock consists of twenty head of cattle.

Boys' Industrial Work.—Carpentry.—The foreman, with his six apprentices, finished the boys' new school-room, reconstructed the laratory and bath-rooms, renewed the sewerage drains, built new water-closets, a dairy, a new boat, a bridge, and made a considerable amount of furniture.

Shoemaking.—The six apprentices have worked very faithfully, and have supplied all the pupils with new shoes; besides attending to the repairing. Several of the boys are sufficiently advanced to make new shoes without the assistance of their instructor.

Painting .- Four boys have repainted all the buildings, and have done it well.

Baking.—All the senior boys and girls have learned the art of baking, and have supplied the house with wholesome bread.

Besides these industrial branches, lessons in milking, butter-making and laundrying have been imparted to all the senior boys.

Girls' Industrial Work.—The girls have been taught all kinds of housework, hand
and resolve action services and chicking descent and other wagning appeared. They

Girls' Industrial Work.—The girls have been taught all kinds of housework, hand and machine sewing, cutting and finishing dresses, and other wearing apparel. They have also done a great deal of fancy work, for which they manifest considerable skill and aptitude.

Moral and Religious Training.—Religious instruction is daily given to the pupils during half an hour, their morning and evening prayers are said in common, and on Sundays all attend divine service in the village church.

Conduct.—The conduct of all the pupils has been exceptionally good.

Health and Sanitary Condition.—On the whole, the health of the pupils has been good. This year the sanitary condition of the school has again been improved, four new patent Philadelphia hoppers were placed on the upper and lower doors, with a regular sewerage drain of vitrified pipes, to the sea. The spacious dormitories and school-rooms are carefully restilated.

Water Supply.—A never-failing stream of fresh water, flowing between the two main buildings supplies the institution with an abundance of water. A hydraulic ram, with a twelve hundred-gallon tank, conveys the water through the buildings.

Fire Pretection.—The pupils are regularly trained in the working of the fire hose, the hendling of ladders and fire buckets, as well as in the operating of the four Star chemical fire-engines; we have water taps to which the hose can be attached in all the principal apartments.

Heating .- The heating of the institution is done by ordinary box stoves.

Recreation.—The boys have a great variety of games, such as football and baseball, mathle-playing, swimming, fishing and boating during the summer, and coasting, chess and checkers during the winter. The girls in their own play-ground amuse themselves at swinging, skipping and playing with balls. Athletic and ealishenic sports take place in our gymnasium, but the centre of all amusements and attractions is our brass band. This summer our band boys were again invited by the committee of the Queen's Birthday celebration to play in the city of Victoria, and I am glad to say were favourably commented upon.

General Remarks.—In concluding my report, I have much pleasure in thanking Superintendent Vowell for the kind assistance given during the year, and for his words of encouragement spoken at the time of his official visit.

I have, &e.,

G. DONCKELE,

Principal.

### BRITISH COLUMBIA.

METLAKAHTLA INDUSTRIAL SCHOOL. Metlakahtla, August 18, 1900.

The Honourable

The Superintendent General of Indian Affairs.

Ottowa.

Sir,-I have the honour to submit my annual report for the fiscal year ended June 30, 1900.

Location.-This school is pleasantly situated in the village of Metlakahtla, on the western side of the Tsimpsean peninsula.

Buildings and Accommodation.—The buildings with their divisions and dimensions are as follows :-

Boys' division-1. The main building, a two-story frame structure, with a frontage of 90 x 60 feet deep, and having sufficient residential accommodation for thirty-five pupils and necessary staff.

2. A comfortable, but rather poorly furnished school-house, 42 x 25 feet, in which the classes are taught.

3. A building, 70 x 22 feet, divided into wood-shed, shoemaker and carpenter's shops, laundry and bath-room.

4. Blacksmith's shop and coal-house, 24 x 18 feet.

5. Stable, 22 x 10 feet.

6. Fowl-house, 20 x 8 feet.

Girls' division-7. A two-story frame building, 54 x 36 feet, with a wing, 18 x 18 feet, and a one-story annex, 18 x 16 feet. It contains the rooms occupied by the matron and her assistants, the girls' dormitories, a dining and store-rooms and a kitchen.

8. A meat-house, and wood and coal-sheds, 67 x 10 feet.

9. A school-house, 36 x 18 feet.

All buildings in the boys' division are on land surrendered by the Indians for the use of the school and is government property. The accommodation is good and sufficient.

The girls' division stands on land leased by the Indians to the Right Reverend the Bishop of Caledonia. The dormitories of that division are too small for the number of pupils that occupy them. It is, however, the intention, if means can be provided, to build on to the laundry another story, to be used as a dormitory, and that when finished should give the necessary sleeping accommodation.

The building in which the girls receive class instruction is on the church reserve, and is suitable for the purpose for which it is used.

All the buildings are kept in good repair, and so far without asking the Indian Department for any grant with which to purchase the materials required to make from time to time the necessary repairs.

Garden and Grounds .- Two small gardens are planted with fruit trees, gooseberry, current and raspberry bushes; and in one of these various vegetables are also grown. The fruit trees have only been planted as an experiment, for very little success has attended the attempts made by any one to grow apples, pears or plums, so far north in the province. But nearly all kinds of small fruit, such as grow on bushes, do remarkably well, the quality under favourable conditions being good and the yield abundant.

All the boys work occasionally at gardening. Through the pressure of other work but little has been done for the improvement of the grounds in front of the school, be-

Attendance.—The average attendance, except during the salmon-fishing season, was about sixty—twenty-five boys and thirty-five girls. Ten of these girls were maintained by Miss Tyte, the matron, and Miss Jackson, the teacher of the girls' school.

yond digging out stumps, forming roads and a few small flower-beds.

Class-room Work.—The boys and girls are taught in buildings separate from each other. Miss Jackson taught the girls until about the middle of April, and Miss Northen since. Both have considerable experience in teaching. The boys were taught by the principal. The subjects of study and instruction were reading, writing, arithmetic, geography, grammar, composition, history, drawing, singing and religious knowledge.

Fair progress has been made. The standing of pupils on the roll for the last quarter was as follows:—

| Standard | Ι   |  |  |  |   |
|----------|-----|--|--|--|---|
| 66       | II  |  |  |  |   |
| 66       | 111 |  |  |  | 1 |
| cc       | IV  |  |  |  |   |
| 66       | V   |  |  |  | 1 |
| 66       | V1  |  |  |  |   |

The ten girls maintained by Miss Tyte and Miss Jackson are not included in the above classification.

Industrial Work.—Nine boys received instruction from Mr. Herbert Clifton in carpentry and painting. They were chiefly employed repairing buildings and furniture, papering and remodelling rooms, painting, erecting fences, building wood and coal sheds and making furniture.

The girls were taught according to their age and strength, cooking, laundry, needle and housework.

Moral and Religious Training.—Religious instruction is given daily, except on Saiurdays. We have morning and evening prayers. On Sundays the pupils attend divine service twice a day, they also attend Sunday school. By these means and by daily teaching the importance of doing what is right, we endeavour to improve and build up the moral character of our pupils.

Conduct.-The conduct of the pupils was good.

Health and Sanitary Condition.—Two girls suffering from consumption were discharged to their friends, and I regret to say died shortly afterwards; with these exceptions there was very little sickness in the school. Underground drains carry off the water from the kitchens and laundries, and disinfectants are used wherever necessary. The ventilation is good and the premises are kept clean.

Water Supply.—The rain-fall on the buildings is conveyed into tanks having a capacity of about six thousand gallons. For domestic purposes that quantity is nearly sufficient. The tanks are frequently cleaned out and the water is good.

Fire Protection.—The boys' department is supplied with chemical fire-extinguishers and fireman's area, and these with ladders and buckets are kept in convenient places in readiness for use should any necessity arise. The elder pupils, particularly the carpenters, are expert at climbing and handling buckets and ladders.

In the village there is also a fire brigade.

In summer and during frosty weather the water supply runs low. Two or three more tanks and a small force-pump would very much improve our means of extinguishing a fire.

Heating.—The rooms on the lower floors are all heated by stoves, but in the dormitories there are no heating appliances.

Recreation.—The boys play according to the season at different kinds of games; but most frequently at rounders, clicket, base and routhell. The girls amuse themselves with sea-saw and skipping.

General Remarks.—Miss Tyte, the matron, is away on furlough, and her place in the meantime is filled by Miss Jackson. Miss H. A. Northen has been appointed teacher of the girls.

Miss Carroll, the seamstress, resigned and is now matron of another industrial

Indian Agent Todd made several visits during the year.

The Sunday school is kindly conducted by Miss West, and other ladies connected with the Church Missionary Society.

I have, &c.,

INO H SCOTT

Principal.

British Columbia.

WILLIAMS LAKE INDUSTRIAL SCHOOL,

WILLIAMS LAKE, July 5, 1900.

The Honourable

The Superintendent General of Indian Affairs,

Ottawa.

Siz,—I have the honour to submit the following report for the year ended June 30, 1900.

Location.—The Williams Lake industrial school is situated in the Lac la Hache valley, on the bank of the San Jose river, Cariboo district.

Buildings.—The boys' building, 66 x 38 feet, two stories and a half high, and the girlst, 13 x 50 feet, two stories and a half high, are considered the finest and largest in this district, and could afford accommodation for one hundred pupils. The harness shop, 30 x 21 feet, is also a very fine building. The first floor contains a large shop and a store; the upper floor gives good accommodation to the instructor and family.

During the year a fourth building, 75 x 35 feet, of very fine appearance has been exceed, containing a kitchen, 25 x 25 feet and five refectories. These apartments are thirteen feet high.

Land.—The grounds near the buildings are well kept. The front parts are reserved for flower and vegetable gardens. The mission owns here over one thousand acres of land, so that we are in a good position to teach the pupils all they must know to be able hereafter to manage a farm.

Attendance and Class-room Work.—The class-room attendance is, of course, regular, the pupils being all boarders. The progress of the children has been antisfactory; some have done remarkably well. Music, both vocal and instrumental, is becoming rapidly a source of pleasure and refinement to boys and girls. Our worthy Indian Superintendent, A. W. Yowell, and E. Bell, Indian agent, are very regular in visiting and examining our pupils, and they certainly must be thanked for their efforts in helping both teachers and pupils.

The pupils were graded at the end of the year as follows:-

|          | Pupi  |
|----------|-------|
| Standard | I 10  |
| 66       | II 4  |
|          | III 9 |
|          | IV 10 |
| 44       | V 17  |

Industries—Mr. Horan, our instructor in saddle and harness-making, reports as follows—During the seven months which have elapsed since I took charge of the harness department as trade instructor, I beg to report that the four boys that are learning the trade are doing well and making great progress, particularly in saddle-making, for which they take a great liking. The shoemaking department, which is now being operated on a small scale, promises to be a good feature, and will be a source of great benefit to the pupils in affer-life.

We have also a carpenter's shop, under the management of an able carpenter. Three boys are learning the trade regularly, but other pupils are also employed occasionally. I must say that the three aforesaid pupils have made considerable progress in their trade.

All the boys learn farming, working in the fields and garden, especially during haying, seeding and harvesting. They also milk fifteen cows.

The girls, under the attentive care of four sisters, are taught to do housework, cook, bake, sew, knit, crochet work, lace-making, &c. They will be able to send many articles of fancy work to the provincial exhibition in New Westminster next fall.

Moral and Religious Training.—Religious instruction is given daily for half an hour. The conduct, both moral or otherwise, of the pupils may be described as good. Teachers and overseers unanimously proclaim a great improvement since last year. But truth compels me to say that politeness is not what it should be.

Health of the Pupils.—The health of the children has given us more anxiety than used. Two boys were sick for a month. One of them was sent home on the advice of the doctor on account of his seriously impaired sight. The other was discharged also on the advice of the doctor, and died two months after. I am sorry to add that a girl, twelve years old, will probably have to be discharged on account of her consumptive state. The other pupils have enjoyed good health.

Sanitary Condition.—The sanitary condition is satisfactory, but will be still improved as soon as our means permit.

Water Supply.—We get our water supply from the San José river, through a ditch which passes above the establishments. This fall, water will be carried to the three buildings and gardens by metal pipes, at a great expense, from a spring more than a mile away. We are obliged to incur this expense on account of the alkaline quality of the water throughout the district.

Fire Protection.—Two men are specially charged with watching the chimney flues, which they frequently sweep. We have chemical extinguishers, sent by the department, and buckets always ready at hand, and a ladder is permanently attached to each building.

Heating.—The heating is by wood stoves.

Recreation.—Our pupils have beautiful play-grounds, and inside large halls are provided for that purpose. The San José river, just a few rods from the buildings, and beautiful ponds afford great pleasure and refreshing baths to our little fishermen and hunters.

I have. &c..

EDM. PEYTAVIN,

Principal.
